

OSFP MSA

Specification for

OSFP OCTAL SMALL FORM FACTOR PLUGGABLE MODULE

Rev 5.0

October 2nd, 2022

Abstract:

This specification defines the electrical connectors, electrical signals and power supplies, mechanical and thermal requirements of the OSFP Module, connector and cage systems. The OSFP Management interface is described in a separate document, Common Management Interface Specification for 8/16X Pluggable Transceivers.

This document provides a common specification for systems manufacturers, system integrators, and suppliers of modules.

Limitations on the Use of this Information:

This specification is provided “AS IS” with no warranties whatsoever, including any warranty of merchantability, non-infringement, fitness for any particular purpose, or any warranty otherwise arising out of any proposal, specification or sample. The authors disclaim all liability, including liability for infringement of any proprietary rights, relating to use of information in this specification. In no event shall the OSFP MSA participants be liable for any direct, indirect, special, exemplary, punitive, or consequential damages, including, without limitation, lost profits, even if advised of the possibility of such damages.

This specification may contain or require the use of intellectual property owned by others. No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted herein, except that a license is hereby granted to download, reproduce and distribute this document under the provisions of the OSFP MSA Agreement.

Revision History:

| | | |
|----------|-----------|--|
| Rev 5.0 | 10/2/2022 | Section 4 is added for the OSFP1600. In Section 5.8 and 5.10, tolerances are updated for OSFP1600. Section 8 is added for the cabled host footprint. Section 12.3 added for OSFP1600 PMDs. Section 13 (Electrical Interface) is updated to support OSFP1600. |
| Rev 4.1 | 8/2/2021 | Cage latch flap radius is enlarged. Cage shoulder keepout added to the stacked SMT cage (Sec 5). Cage assembly tolerance is relaxed (Sec 5). |
| Rev 4.0 | 5/28/2021 | Type 2 and 3 modules with bigger front are added (Fig 3-3). Module latch release feature is further clarified (Sec 3.7). Optional riding heatsink is added (Sec. 4.5). Case temperature location requirement and connector environmental requirement are added (Sec. 8). OSFP-RHS nose shape is updated to avoid a potential interference with a connector (Fig 9-8). OSFP-RHS heatsink contact area is adjusted (Sec. 9). OSFP800 specification is added, with PMDs (Sec. 10.2) and electrical information (Sec. 11.4). More optical connector configurations are added (Section 10.3). Max current to the module is increased to 10A, supporting 30W module (Sec. 11.6). Lower power mode is added to allow up to 2W (Table 11-8). |
| Rev 3.0 | 3/14/2020 | Specifications for the stacked SMT connector and its cage are added to section 5. Reference design of cage vent holes are added to SMT single row cage. Universal MIS is added to the reference section. |
| Rev 2.0 | 1/14/2019 | Major updates including: Touch temperature (section 3.9), stacked cage/connector (section 5), OSFP-RHS (section 8) and informative pull tab length (Appendix B) are added. Impedance requirement for the OSFP is relaxed (section 7.2). Management interface speed is increased (Section 10.5). Power class definition are updated, with increase of max power to 21.1W (section 10.6). GD&T of the drawings are updated. MPO-12 two row and MPO-16 lane assignments are added (section 9.8). |
| Rev 1.12 | 8/1/2017 | Editorial updates, as of: Note 1 in the Figure 1 is clarified with "0.00mm max from top". PMD in the section 7 and titles are updated, including Figure 49 and 50 the optical receiver/transmitter lane numbers are revised to avoid any confusion. In section 8, word "must" replaced with "shall". Legal claim at page 1 "fitness or any.." typo fixed as "fitness for any..". |
| Rev 1.11 | 6/26/2017 | Editorial updates, as of: Typo in the figure number in the figure table of contents fixed; Revision history added. |
| Rev 1.1 | 6/7/2017 | Minor updates, as of: MPO 24 lane assignment (section 7.7.3) removed, to remove conflict with other industry conventions ; PCB location with respect to the module is specified with MMC modifier, to provide better dimensional control (Figure 8) ; Test ambient condition (20C, sea level) specified for the clarification in the module airflow impedance (Figure 42) ; In section 8.5, "optional" added to the fast and high-speed bus mode to clarify that those modes are optional ; In table 8-6, T_hplp description is updated for better clarification of the feature ; Power filter inductance adjusted to increase the power supply margin (Figure 59) |
| Rev 1.0 | 3/17/2017 | Initial Release |

1 Scope

The OSFP specification defines:

- The OSFP module mechanical form factor, including latching mechanism;
- Host cage together with the mating connector;
- Electrical interface, including pin-out, data, control, power and ground signals;
- Mechanical interface, including package outline, front panel and printed circuit board (PCB) layout requirements;
- Thermal requirements and limitations, including heat sink design and airflow;
- Electrostatic discharge (ESD) requirements, and;
- The module management interface (contained in the OSFP Management Specification).

3 OSFP Module Mechanical Specification

For OSFP1600 (OSFP module which support 200G per lane), see section 4. For OSFP or OSFP800, which support 50G or 100G per lane, either of the mechanical specification in this section or section 4 to be applied.

3.1 Overview

A typical OSFP module is shown in Figure 3-1. An assortment of connector types are shown. Connector and cable variations not shown here are allowed, including as depicted in Section 12.4.

Figure 3-1: OSFP module with different connectors (Duplex LC, MPO, CS®, Copper)

In the module mechanical drawings included throughout this specification, the datum as defined in Table 3-1 shall apply.

Table 3-1: Descriptions of the module mechanical datum

| Designator | Description | Figure |
|------------|--|---------------------------------|
| A | Width of Module | Figure 3-2 |
| B | Forward stop of Module | Figure 3-2; also see Figure 3-8 |
| C | Bottom surface of Module | Figure 3-2 |
| D | Width of Module pc board | Figure 3-19 |
| E | Signal pad leading edge of Module pc board | Figure 3-19 |
| F | Top surface of Module pc board | Figure 3-19 |

Figure 3-2 shows the dimensions of the Standard OSFP module. Note that the module is shown with a typical latch release mechanism without a pull tab. Alternate latch release mechanisms are allowed. All dimensions in this specification are in millimeters (mm) unless otherwise noted.

NOTES:

- [1] FRONT OF THE MODULE, PULL TAB AND OTHER COMPONENTS CAN EXTEND 1.6MM MAX FROM THE BOTTOM OF THE MODULE AND CAN HAVE UP TO 22.93mm WIDTH IN THE MAX ENVELOPE SHOWN.
- [2] APPLIES TO TYPE 1 MODULE ONLY.
- [3] INDICATED SURFACES (ALL 4 SIDES) TO BE CONDUCTIVE FOR CONNECTION TO CHASSIS GROUND.
- [4] APPLIES FROM THE TOP OF THE MODULE TO THE BOTTOM OF THE MODULE, INSIDE THE CAGE.

Figure 3-2: OSFP overall dimensions

Figure 3-3 shows the total length and front height of Type 1, Type 2 and Type 3 OSFP modules. A Type 2 OSFP module provides maximum of 16mm additional length in front than a Type 1 module, and a Type 3 OSFP module provides maximum of 3.6mm additional height in the front than a Type 2 module. Type 2 and Type 3 module can provide additional space for various optical interface, as described in the section 12.4.

Type 3 OSFP module is not compatible with stacked cage in the section 6 and 7.

Figure 3-3: Size of module front, for Type 1, Type 2 and Type 3 OSFP

Figure 3-4: OSFP label reference location

Figure 3-4 shows the recommended label location. Figure 3-5 shows the corner radius of the module.

Figure 3-5: OSFP corner radius

3.2 OSFP Nose

To mate with an electrical connector located in the cage, an OSFP module shall have a protruded printed circuit board (PCB) with contact pads. A structure consisting of upper and lower lips forms a nose (i.e., back of the module) that serves as a guard to protect the PCB. Figure 3-6 through Figure 3-12 show the dimensional requirements of the nose, including the shape of the lip, connector mating area, forward stop, ventilation holes and location of the signal pads.

Figure 3-8 shows the location of the forward stop, consisting of the left and right vertical side walls of the bottom case of the module, which interact with features in the connector cage to stop the module when it is fully inserted. The vertical side walls shall extend at least 7.0 mm upward as measured from the bottom of the module for the forward stop feature.

Figure 3-6: OSFP nose, side view

Figure 3-7: OSFP nose, side view, no component area

Figure 3-8: OSFP nose, side view, location of the forward stop

Figure 3-9: OSFP nose, bottom view

Figure 3-10: OSFP nose, bottom view, optional signal pad inspection holes

Figure 3-11: OSFP nose, top view: dimension for ventilation holes

Figure 3-12: Signal pad location to module (left: top view, right: bottom view)

3.3 Heat Sink, Closed Top

In order to dissipate heat, the module allows for airflow along its length. Figure 3-13 shows requirements for the heat sink location in order to avoid collision with the keying feature in the cage and also ensure proper contact with ground and an optional thermal interface. Refer to Figure 5-11 for details of the key feature located in the cage.

Figure 3-13: Heat sink, top view

The thermally conductive area in Figure 3-13 should have surface flatness and roughness as in Table 3-2. The area may contact with the riding heatsink, which depicted in the section 5.5.

Table 3-2: Surface flatness and roughness for the thermally conductive area

| Module Power (Max.) | Surface Flatness | Surface Roughness |
|--|-------------------|--------------------|
| N/A | 0.12mm or better | Ra 1.6μm or better |
| Recommended for module with more than 20W (Optional) | 0.075mm or better | Ra 0.8μm or better |

Figure 3-14: Examples of heat sink design (See Figure 3-13 for cross-section location)

Figure 3-14 presents two examples of heat sink design. Either may be considered for use. Alternate designs different from examples presented may also be used, but any heat sink design shall allow for an amount of airflow as defined in Section 10.2.

As shown in the Figure 3-15, top trailing edge of the closed top heatsink to have a minimum edge break to avoid riding heatsink damage.

Figure 3-15: Flat top heatsink details, rear of plug

3.4 Heat Sink, Open Top

Modules which have a non-closed top, i.e. open top, are allowed only when the heat sink fins are designed to meet the dimensional requirements outlined in Figure 3-16 through Figure 3-18 in order to prevent EMI finger damage and to ensure proper EMI shielding. Height and length of the heat sink may differ from reference height presented, but still shall allow an amount of airflow as defined in Section 10.2.

Figure 3-16: Open top heat sink (Isometric view)

Figure 3-17: Heat sink location

Figure 3-18: Heat sink fin pitch

The top and bottom internal EMI fingers are specified per this fin pitch, as depicted in Figure 5-8. It is possible to add airflow passages to the bottom of the module with this fin pitch for thermal management of high power modules.

3.5 Card-edge Design (Module Electrical Interface)

The OSFP module contains a PCB with contact pads (i.e., module PC board; paddle card) that mate with a connector as specified in Section 5.10 of this document. Critical dimensions for the contact pads are shown in Figure 3-19 through Figure 3-21. The contact pads on the PCB are designed for sequence mating during module insertion as follows:

- First mate: ground contacts
- Second mate: power contacts
- Third mate: signal contacts

During module removal, contact disconnects happen in reverse order of the above, e.g., signal contacts break first.

Figure 3-19: OSFP module pc board (card-edge)

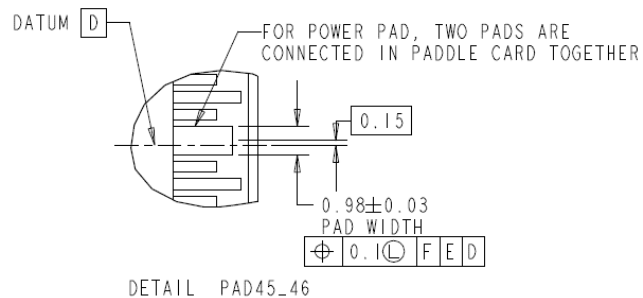

Figure 3-20: OSFP card-edge, detail of power pad (pads 45/46)

Figure 3-21: OSFP card-edge, detail of power pad (pads 15/16)

3.6 Contact Pad Plating Requirements

The contact pad plating shall meet the durability requirements of Section 9.1 and Section 9.2. The recommended plating specification is 0.762µm minimum gold over 3.81µm minimum nickel. Other plating systems are allowed provided they meet or exceed the requirements of Section 9.1 and 9.2.

3.7 Module Latch Feature

For latching, the module shall have latching pockets and a latch release mechanism at both sides as shown in Figure 3-22 to Figure 3-25. Dimensional details of the cage flap can be found in Figure 5-19 and Figure 5-20. For the reference fixture mentioned in the Figure 3-23, see Appendix D.

Figure 3-22: Latch pocket location

- SECTION LATCH - LATCH
- 1 MAXIMUM OUTSIDE ENVELOPE BETWEEN TWO OPPOSITE LATCH RELEASES, PER INSPECTION BY OPTICAL OR REFERENCE FIXTURE
 - 2 MINIMUM INNER RADIUS 0.20mm. NO SHARP CORNER ALLOWED. MINIMUM INNER RADIUS 0.50mm RECOMMENDED.
 - 3 FLAT AREA OF MINIMUM 0.50mm RECOMMENDED.
 - 4 HARDNESS 320 HV MINIMUM RECOMMENDED FOR LATCH RELEASE

Figure 3-23: Latch release max width and latching pocket round

Figure 3-24: Latching pocket length

Figure 3-25: Latch plane corner radius and release details

In Figure 3-25, two reference designs are given. Different latch release designs are allowed, as long as reliable latch release can be achieved.

3.8 Module Color Code

The module shall adhere to a color code by application of color to its pull-tab or other appropriate method. The color code to be applied is given in Table 3-3.

Table 3-3: OSFP color code

| Product Type | Example PMD | Color | Pantone Code (Recommended) |
|--------------------------------------|-----------------------------|--------|----------------------------|
| OSFP copper cables | 400G/800G/1600G-CR8 | Black | N/A |
| OSFP AOC Cables | 400G/800G/1600G -AOC | Grey | 422U |
| OSFP 850nm solutions | 400G/800G/1600G -SR8, SR4.2 | Beige | 475U |
| OSFP 1310nm solutions for up to 500m | 400G/800G/1600G DR4 | Yellow | 107U |
| OSFP 1310nm solutions for up to 2km | 400G/800G/1600G FR4, FR8 | Green | 354C |
| OSFP 1310nm solutions for up to 10km | 400G/800G/1600G LR8 | Blue | 300U |
| OSFP 1310nm solutions for up to 40km | 400G/800G/1600G ER8 | Red | 1797U |
| OSFP 1550nm solutions for up to 80km | 400G/800G/1600G ZR8 | White | N/A |

3.9 Touch Temperature

Module surfaces outside of the cage must comply with applicable touch temperature requirements. If the temperature of the module case will exceed applicable short-term touch limits, then a means to prevent contact with the case during the handling of the module shall be provided. Refer to UL 62368-1 and NEBS GR-63.

4 OSFP1600, Card Edge and Latch Specification

This section describes the amended mechanical specification to the section 3, which applies to the OSFP1600 modules. OSFP or OSFP800 may use the specification in this section. Specification in the section 4 should be applied as a whole, not partially applied.

4.1 Forward Stop of the Module to Leading Edge of the Signal Pad

Figure 4-1 replaces Figure 3-12, bringing the leading edge of the signal pad closer to the positive stop of the module.

Figure 4-1: Signal pad location to module for OSFP1600 (left: top view, right: bottom view)

4.2 Card Edge Design

Figure 4-2 and Figure 4-3 replaces Figure 3-19 for OSFP1600.

I NOMINAL CONTACT POINT WHEN THE MODULE IS FULLY PUSHED IN

TOP VIEW

SIDE VIEW

BOTTOM VIEW

[2] COMPONENT KEEP OUT AREA (MATED WITH CONNECTOR), FOR BOTH SIDES

[3] AVOID COMPONENT PLACEMENT (PCB EXPOSED IN SIDE VIEW), FOR BOTH SIDES

Figure 4-2: OSFP1600 module pc board (card-edge)

Figure 4-3: OSFP1600 module pc board chamfer (card-edge)

And Figure 4-3 shows the details of the lead-in chamfer. Overall, the OSFP1600 paddle card have shorter pad plates and allows shallower lead-in chamfer.

4.3 Module Latch Feature

This section replaces section 3.7. Figure 4-4 and Figure 4-5 shows the latch location from the bottom of the module and the latch pocket length OSFP1600 is identical with OSFP.

Figure 4-4: OSFP1600 module latch pocket location

Figure 4-5: OSFP1600 module latch pocket length

As in the Figure 4-6 and Figure 4-7, the latching pocket depth and latching wall angle is designed to minimize the module front-to-back clearance. For the reference fixture in the Figure 4-7, see Appendix D. For the module label pocket, it is identical with OSFP, as in the Figure 3-4.

Figure 4-6: OSFP1600 module latch pocket depth and angle

Figure 4-7: OSFP1600 module latch release details

5 Single Row Surface Mount Technology OSFP Connector and Its Cage: Mechanical Specification

In this section, the configuration of a single row SMT (Surface Mount Technology) connector and its cage are presented.

5.1 Overview

Figure 5-1 gives an overview of a 1x1 and 1x4 cage without modules installed. Figure 5-2 depicts a 1x1 cage with an OSFP module in the fully inserted position.

Figure 5-1: 1x1 and 1x4 cage, host PCB and panel

Figure 5-2: OSFP module in a 1x1 cage

In the cage and connector mechanical drawings included throughout this specification, the datum as defined in Table 5-1 shall apply. For datum of the module, see Table 3-1.

Table 5-1: Descriptions of the cage and connector mechanical datum

| Designator | Description | Figure |
|------------|--|-------------------------|
| G | Forward stop of Cage | Figure 5-3 |
| H | Seating plane of Cage on host pc board | Figure 5-3 |
| J | Width of inside of Cage | Figure 5-4 |
| K | Connector guide post #1 | Figure 5-6; Figure 5-24 |
| L | Cage Pin #1 | Figure 5-3 |
| M | Top surface of host pc board | Figure 5-14 |
| N | Host pc board through hole #1 to accept Connector guide post | Figure 5-14 |
| P | Host pc board through hole #2 to accept Connector guide post | Figure 5-15 |
| R | Host pc board through hole #1 to accept Cage Pin | Figure 5-15 |
| S | Width of Connector | Figure 5-24 |
| T | Front surface of Connector | Figure 5-24 |
| U | Seating plane of Connector | Figure 5-24 |

5.2 Cage Dimensions and Positioning Pin

Figure 5-3 through Figure 5-5 shows cage datum, positioning pin, port size and cage height. In addition, Figure 5-6 shows nominal dimensions between the module and the cage when

the module is fully inserted. Note that the compliant pins in the cage are placed to support belly-to-belly applications. For ganged cages, some compliant pins shall be shorter to support the belly-to-belly application properly. Figure 5-7 shows the length of the compliant pins for a 1x4 cage. Figure 5-17 shows the host PCB board layout for a 1x4 cage.

Figure 5-3: Cage positioning pins and forward stop

Figure 5-4: Port internal width and height

Figure 5-5: Side view of a 1x1 cage with vertical cage dimensions

DATUM B: MODULE FORWARD STOP
 DATUM G: CAGE FORWARD STOP
 DATUM K: CONNECTOR GUIDE POST

THIS FIGURE SHOWS THE DATUM ALIGNMENT BETWEEN CONNECTOR, CAGE AND MODULE AND ALSO SHOWS THE REFERENCE DIMENSION OF THE MODULE INSIDE CAGE, WHEN THE MODULE IS FULLY PUSHED IN.

Figure 5-6: Side view of a 1x1 cage with axial reference dimensions

Figure 5-7: Length of the compliant pins into the board, for belly-to-belly application

5.3 EMI Finger Pitches

Figure 5-8 gives EMI finger dimensions to be used for the internal side of top and bottom EMI fingers. These pitches are designed such that the OSFP module as described in Section 3.4 is compatible. Fingers for the left, right, and outside of the cage shall be designed to ensure appropriate EMI shielding, but finger pitch is not specified. This EMI finger pitch specification shall be applied to the stacked SMT cage (Section 6) and stacked press-fit cage (Section 7).

Figure 5-8: Internal EMI finger, top and bottom

5.4 Ventilation Hole, Key and Stop

Figure 5-9 shows the key and forward stop features. The keying feature will prevent the module from being inserted upside down.

Figure 5-9: Key and stop

The cage should have ventilation holes to allow airflow. Refer to Figure 5-10 and Figure 5-11 for examples of ventilation hole details.

Figure 5-10: Rear ventilation holes, three example designs

Figure 5-11: Top ventilation holes, two example designs

5.5 Riding Heatsink

An OSFP cage may have a riding heatsink. Figure 5-12 shows the cutout size of the cage for the riding heatsink. Figure 5-13 shows the reference design of the leading edge of a riding heatsink. The force which will be applied from the riding heat sink to an OSFP module should not exceed 36N downward.

Figure 5-12: OSFP with a riding heatsink (above) and cutout on the cage for a riding heatsink in OSFP (bottom)

Figure 5-13: Heat sink leading edge, reference design

5.6 Host PCB Layout – 1x1 Cage

The host PCB layout pattern to accept a 1x1 cage is detailed in Figure 5-14 through Figure 5-16.

Figure 5-14: Host PCB layout for 1x1 cage

Figure 5-15: Host PCB layout, details

Figure 5-16 shows keep out areas and optional solder rings. The solder rings are for SMT belly-to-belly applications, thus applying solder to the area is optional. The keep out areas are there in order to prevent interference with the connector in Figure 5-24. The keep out areas should be kept in the layout in all cases regardless of whether solder is applied to the optional solder ring area.

Figure 5-16: Solder ring for belly-to-belly application

5.7 Host PCB Layout – 1x4 Cage

For a 1x4 cage, the host PCB layout shall have a 23.23mm horizontal pitch from cage-to-cage as in Figure 5-17.

Figure 5-17: Host PCB layout for 1x4 cage

Figure 5-18 compares the host PCB layout between the 1x1, 1x2 and 1x4. The details of the 1x2 PCB layout are not given in this document.

Figure 5-18: Comparison of host PCB layout between 1x1, 1x2 and 1x4

5.8 Latch Flaps in Cage

In the cage, flaps as shown in Figure 5-19 and Figure 5-20 shall be on both sides of the cage to latch the module into the cage. Flaps are shown in a 1x1 cage but can be applied to a ganged cage such as a 1x4 cage or any 1xN cage. The cage latch flap shall be designed to meet the dimension 44.80mm, cage latch flap to module stop, in mated condition as in the Figure 5-21. If the cage is to be inspected under unmated condition, the cage height in the unmated condition should be considered so that the flap location meets the requirement in the mated condition.

Figure 5-19: Latch feature, left and right side

Figure 5-20: Latch flap, cross-sectional view from top, unmated condition

[1] 44.80 ± 0.08 ALLOWED FOR OSFP AND OSFP800 PRODUCT

[2] NOMINAL CAGE FLAP HEIGHT FOR MATED CONDITION

Figure 5-21: Latch flap, dimension from the positive stop

5.9 Bezel Panel Cut-Out

The EMI spring fingers of the cage shall make contact to the inside of the bezel panel cut out in order to make ground contact. Figure 5-22 and Figure 5-23 show recommended dimensions of the bezel panel cut-out. As the horizontal pitch of the cage is 23.23mm, the bezel cut out width of 1x2 shall be 47.51mm while the detailed design is not depicted here.

Figure 5-22: Bezel design and location for 1x1 cage

Figure 5-23: Bezel design for 1x4 cage

5.10 Single Row SMT Connector

The electrical connector shall have the following dimensions to properly receive the module as well as allowing for air to pass over the module to the outside. The tail direction of the connector is specified as shown.

1 MODULE PC BOARD NOT TO BOTTOM AGAINST RECEPTACLE

2 4.25 ± 0.125 ALLOWED FOR OSFP AND OSFP 800G CONNECTOR

Figure 5-24: Surface mount connector

5.11 Blank Plug

Any unused or empty port of a cage shall have a blank plug. The blank plug shall serve to minimize EMI while at the same time allowing for a maximum airflow no more than that of a module. See Figure 5-25 for a recommended design. Blank plug shall be used on the stacked SMT (Section 6) and Stacked press-fit cage (Section 7).

Figure 5-25: OSFP blank plug (reference design)

6 Stacked Surface Mount Technology Connector and Its Cage

In this section, the configuration of stacked SMT connector and cage are presented. Note that the stacked SMT connector and cage is compatible only with Type 1 and Type 2 OSFP modules, not with Type 3 OSFP module as in the Figure 3-3.

6.1 Overview

Figure 6-1 gives an overview of a 2x1 SMT connector, cage, host PCB and the panel.

Figure 6-1: Stacked SMT 2x1 cage with host PCB and the panel

In the mechanical drawings of this section, the datum as defined in Table 6-1 shall apply. Note that the same designators are used for the corresponding features of the single row SMT connector and its cage, as in Table 5-1.

Table 6-1: Descriptions of the Stacked SMT cage and connector mechanical datum

| Designator | Description | Figure |
|------------|--|-------------|
| G | Forward stop of Cage | Figure 6-2 |
| H | Seating plane of Cage on host pc board | Figure 6-2 |
| J | Width of inside of Cage | Figure 6-3 |
| K | Connector guide post #1 | Figure 6-18 |
| L | Cage Pin #1 | Figure 6-2 |
| M | Top surface of host pc board | Figure 6-9 |
| N | Host pc board through hole #1 to accept Connector guide post | Figure 6-9 |
| P | Host pc board through hole #2 to accept Connector guide post | Figure 6-9 |
| R | Host pc board through hole #1 to accept Cage Pin | Figure 6-9 |
| U | Seating plane of Connector | Figure 6-18 |

Latch, stop and keying features of the cage are not specified in the mechanical drawings in this section. For those features, the same specification as the single row SMT connector and its cage in section 4 shall apply.

6.2 Cage Dimensions and Positioning Pin

Figure 6-2 through Figure 6-4 show cage datum, positioning pin, port size, and cage height. Figure 6-5 shows that the middle row compliance pins in the 1x4 cage should be shorter than the others to support belly-to-belly applications.

Figure 6-2: Cage positioning pins and forward stop

Figure 6-3: Port internal width, height and vertical pitch

Figure 6-4: Side view of 2x1 cage with vertical cage dimensions

Figure 6-5: Length of the compliance pins at the middle, for belly-to-belly applications

6.3 Ventilation Holes

Cage should have ventilation holes to allow sufficient airflow. Figure 6-6, Figure 6-7 and Figure 6-8 show an example design.

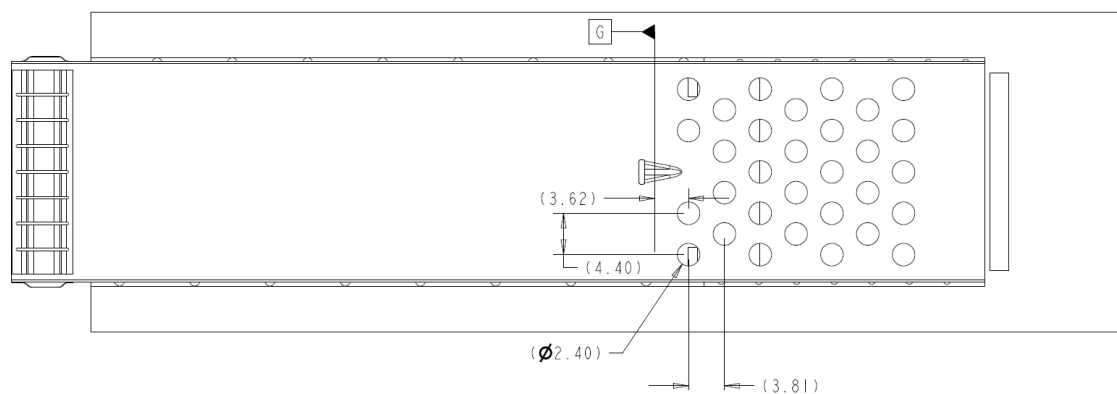

Figure 6-6: Top ventilation, example design

Figure 6-7: Side ventilation, example design

Figure 6-8: Rear ventilation, example design

6.4 Host PCB Layout – 2x1 Cage

The host PCB layout pattern for 2x1 SMT connector and cage are presented in this section. Note that pads 1 to 60 correspond to pins 1 to 60 of the OSFP in the lower port as in Figure 13-1, while pads 61 to 120 correspond to pins 1 to 60 of the OSFP in the upper port.

Figure 6-9: Host PCB Layout for 2x1 SMT cage

Figure 6-10: Host PCB layout, details

Figure 6-11: Layout for peg, retaining feature and ground pad

Figure 6-12: Details of optional solder ring (left) and cage pin keepout (right)

6.5 Host PCB Layout – 2x4 Cage

In this section, host PCB layout for the ganged cage is presented in a 2x4 cage host layout. Figure 6-14 shows the comparison of 2x1, 2x2 and 2x4, while the detailed layout specification of the 2x2 is not provided here.

Figure 6-13: Host PCB layout for 2x4 cage

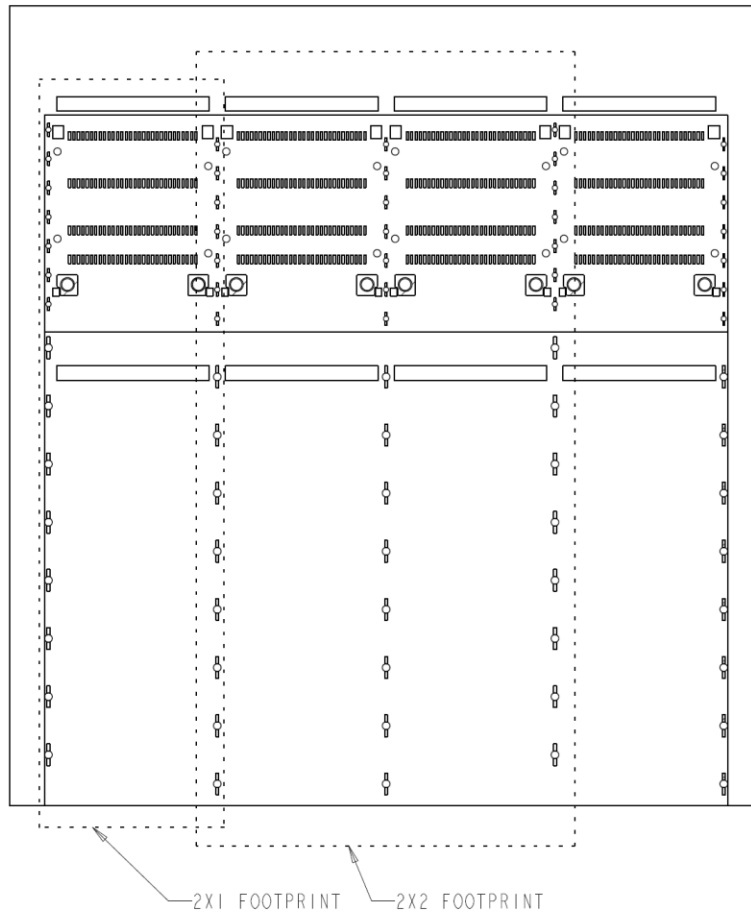

Figure 6-14: Comparison of SMT stacked 2x1, 2x2 and 2x4

6.6 PCB Thickness and Footprint for Belly-to-Belly Application

In this section, the minimum PCB thickness for the belly-to-belly application is shown, along with its host PCB layout. The cage and connector should be able to support a minimum PCB thickness as specified in Figure 6-15.

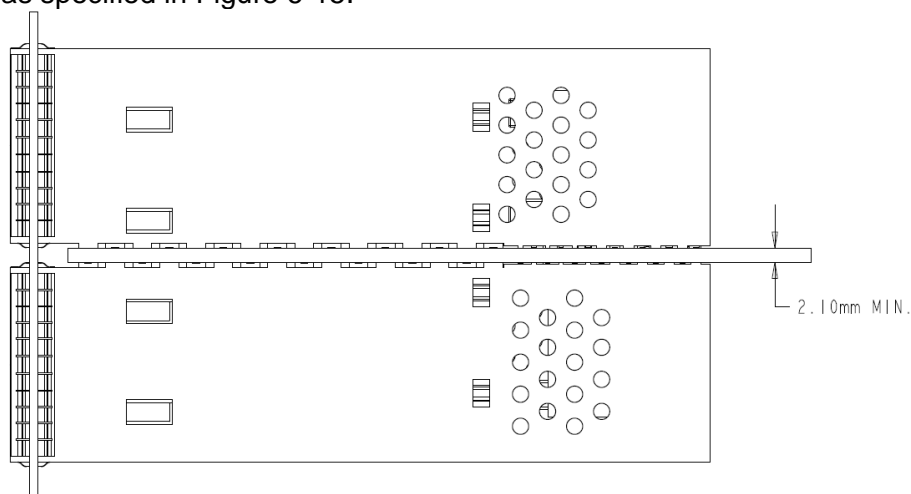

Figure 6-15: PCB thickness for belly-to-belly applications

Figure 6-16: The host PCB layout for the 2x1 belly-to-belly applications

6.7 Stacked SMT Connector

Figure 6-17 to Figure 6-19 show the maximum mechanical envelope of the stacked SMT connector. Actual connector shape shall be smaller than this envelope. Figure 6-20 shows an example design, where the connector is optimized to provide better airflow to bottom row. For the contact and peg dimensions, specifications as defined in the section 4.9 for the single row SMT connector shall be applied.

Figure 6-17: Stacked SMT connector, front view

Figure 6-18: Stacked SMT connector, side view

For the retaining feature in Figure 6-18, the feature should be designed to allow proper retaining of the connector during and after soldering. The SMT tail direction shall be as defined in Figure 6-19.

Figure 6-19: SMT tail direction

Figure 6-20: Example of actual connector design

6.8 Bezel Panel Cut-Out

In this section, the recommended shape for the bezel to make contact with the EMI finger of the cage is presented.

Figure 6-21: Bezel design and location for SMT 2x1 Cage

7 Press-fit Stacked OSFP Connector and cage Mechanical Specification

In this section, the press-fit stacked connector and cage for OSFP is described. Note that the stacked SMT connector and cage is compatible only with Type 1 or Type 2 OSFP modules, not with Type 3 OSFP module as in the Figure 3-3.

7.1 Overview

Figure 7-1: Overview of stacked cage, 2x1 and 2x6

In Figure 7-1, stacked cages of 2x1 and 2x6 are shown to demonstrate the stacked ganged cage. Both of the cages are shown with host PCB board and front panel. For stacked cage, additional datum as defined in Table 7-1 shall apply.

Table 7-1: Descriptions of the module mechanical datum

| Designator | Description | Figure |
|------------|---------------------------------|-------------|
| V | Centerline of the Connector Peg | Figure 7-15 |
| Y | Rear Surface of the Connector | Figure 7-15 |

7.2 Cage Dimensions and Positioning Pin

Figure 7-2 shows the location of the cage positioning pins and the forward stop. Note that the host PCB have significant distance from the front of the cage. In Figure 7-3, the vertical pitch of the stacked cage is defined. To ensure sufficient strength of the cage compliant pins, two material thickness of 0.40mm and 0.25mm are used in the reference design of the cage. 0.40mm thickness is used where the cage compliant pins are used. Figure 7-4 shows reference dimensions of the cage when assembled with host PCB and OSFP module.

Figure 7-2: Stacked cage positioning pins and forward stop

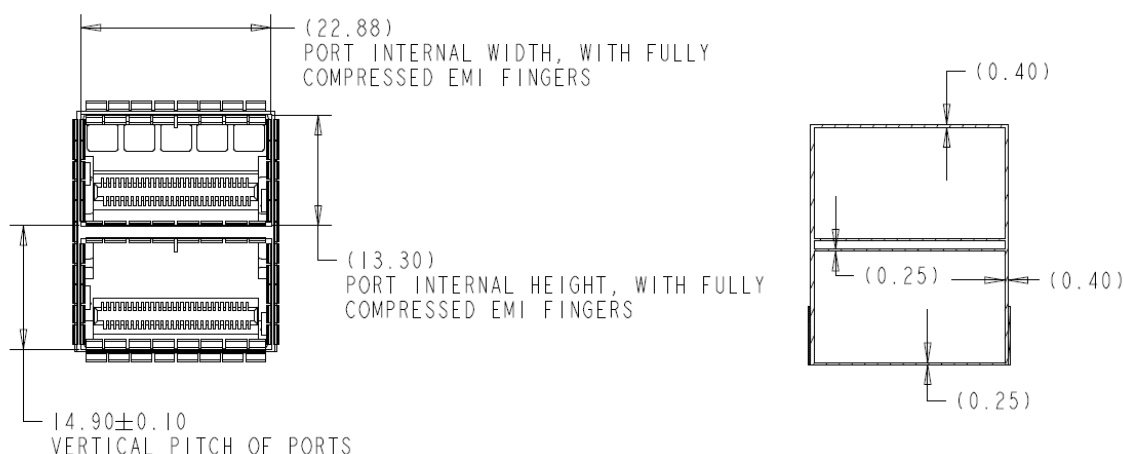

Figure 7-3: Stacked cage, port internal size, pitch and wall thickness

Figure 7-4: Cage with OSFP module, reference dimensions

7.3 Ventilation Holes

For proper cooling of the OSFP module in the stacked cage, the cage shall have appropriate ventilation holes. From Figure 7-5 to Figure 7-8, the ventilation holes required in the stacked

ganged cage are described. The vent holes are designed not only to help with airflow from front to back of the cage, but also to help with airflow between the top and bottom rows of the cage, airflow between neighboring ports and to the bottom of the cage.

Figure 7-5: Overview of ventilation holes in the stacked cage

Figure 7-6: Ventilation holes at the back of the cage

Figure 7-7: Ventilation holes in the horizontal divider and bottom

Figure 7-8: Ventilation holes in the side of the cage, and vertical divider

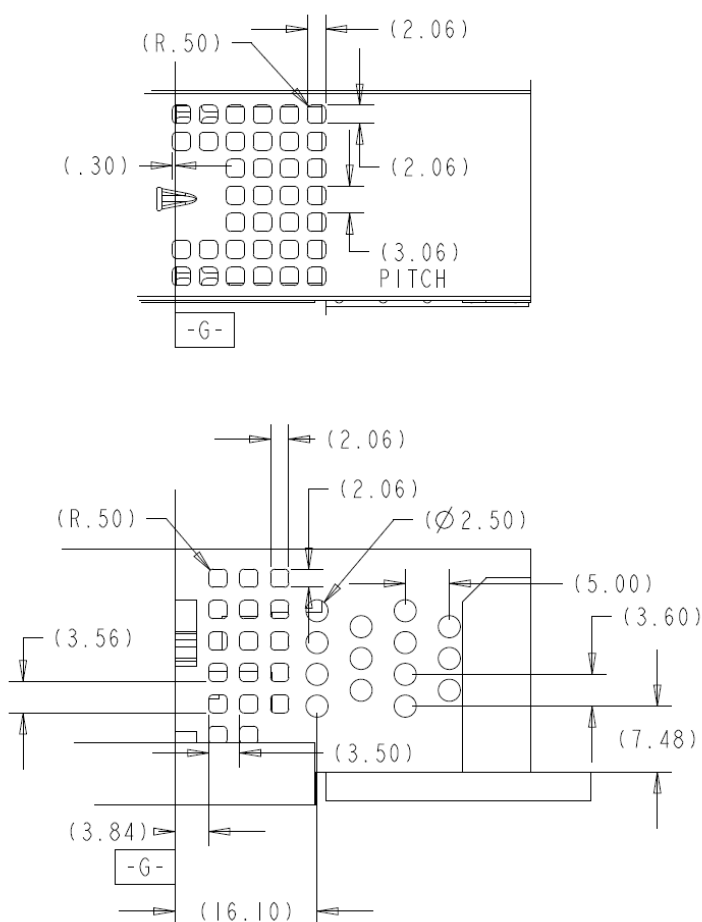

Figure 7-9: Ventilation holes in the top (above view) and side (bottom view) of the cage, alternative example

Rear ventilation pattern, Figure 7-6, is different with stacked SMT cage in Figure 6-8 because the connector shapes are different. Figure 7-9 shows an alternative example design for top and side vent hole.

7.4 Host PCB Layout – 2x1 Cage

L2: PIN 2 OF THE LOWER PORT. U59: PIN 59 OF THE UPPER PORT.
SEE OSFP MODULE PIN OUT FOR PIN NUMBER CODE AND DETAIL FIGURE.

Figure 7-10: Host PCB layout for stacked connector

Figure 7-11: Host PCB pins for stacked connector

7.5 Host PCB Layout – Ganged Stacked Cage

As shown in the Figure 7-12, ganged stacked cages shall have a pitch of 23.38mm.

Figure 7-12: Host PCB layout for stacked ganged cage (shown with 2x6)

7.6 Bezel Panel Cut-out

Figure 7-13 shows the bezel cut out for a 2x1 cage. Figure 7-14 shows bezel cut out for a 2x6 cage.

Figure 7-13: Bezel design and location for 2x1 cage

Figure 7-14: Bezel design for 2x6 cage

7.7 Electrical Connector for Stacked Cage (Press-fit)

The stacked electrical connector shall have the following dimensions to properly receive the module as well as allowing for air to pass over the module to the outside.

Figure 7-15: Stacked connector, side view

Figure 7-16: Stacked connector, front and back view

Figure 7-17: Stacked connector, bottom view

8 Cabled Connector Footprints

In this section, footprints for the cabled connectors are shown. Low speed signal and power are delivered through the host board and the compliance pin in the cabled connector, while the high speed signals will be transmitted through the cable.

The connector and the cage are not shown in this section but compatible with all OSFP modules. They shall be compatible with OSFP modules. The mechanical feature of the connector and the cage will be compatible with the 1x1 SMT or 2x1 SMT connector and cage shown in the previous sections.

8.1 1x1 Cabled Host Footprint

For single side application, two types of host PCB footprints, CHF-A (Cabled Host Footprint A) and CHF-B, are available. See Figure 8-1 to Figure 8-4 for the details of those footprints. Figure 8-5 and Figure 8-6 show CHF-B2B (Cabled Host Footprint for Belly to Belly), which is for the belly to belly configuration for both sides with the cabled connectors. In CHF-B2B, one side is CHF-A and the other side is CHF-B to avoid interference.

Figure 8-1: CHF-A (Cabled Host Footprint A)

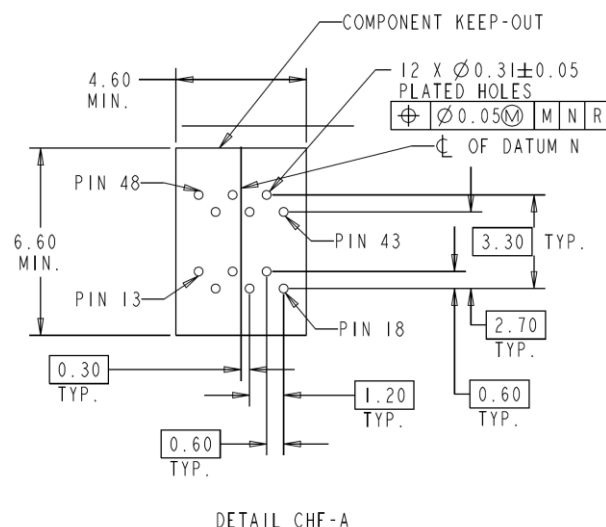

Figure 8-2: Detail of CHF-A

Figure 8-3: CHF-B (Cabled Host Footprint B)

Figure 8-4: Detail of CHF-B

Figure 8-5: CHF-B2B (Cabled Host Footprint, Belly to Belly)

Figure 8-6: Detail CHF-B2B of the previous figure

Figure 8-7 and Figure 8-8 show the belly to belly footprint with single row SMT connector and the cabled connector on the other side. CHF-A is preferred as it gives more clearance from the plated through hole to the SMT soldering pads, as in the Figure 8-7.

Figure 8-7: Belly to Belly, SMT and CHF-A

Figure 8-8: Belly to Belly, SMT and CHF-B

8.2 Host PCB Footprint, Stacked Cabled

In this section, host PCB footprint with stacked cabled connector and the cage is shown. There are two types in the footprint, 2x1 CHF-A and 2x1 CHF-B (Figure 8-9 to Figure 8-12) for single side application. For a belly to belly application, 2x1 CHF-B2B (Figure 8-13 and Figure 8-14) shall be used.

Figure 8-9: 2x1 CHF-A (2x1 Cabled Host Footprint A)

Figure 8-10: Detail of 2x1 CHF-A

Figure 8-11: 2x1 CHF-B (2x1 Cabled Host Footprint B)

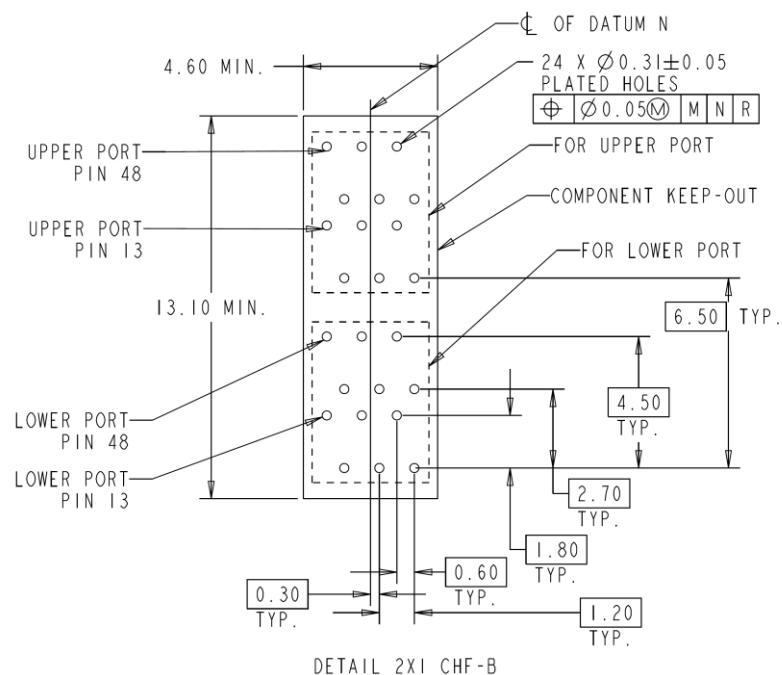

Figure 8-12: Detail of 2x1 CHF-B

Figure 8-13: 2x1 CHF B2B (2x1 Cabled Host Footprint, Belly to Belly)

Figure 8-14: Detail of 2x1 CHF B2B

It is also possible to have a belly to belly of stacked SMT connector on one side of the board and the stacked cabled connector on the other side, as shown in the Figure 8-15. Although both type of the cabled connector can be used, 2x1 CHF-A is preferred as it gives more clearance between the footprints of both sides than 2x1 CHF-B.

Figure 8-15: Belly to belly host footprint, top side stacked SMT and stacked cable B

DETAIL SMT AND 2X1 CHF-A
 2X1 SMT STACKED (SIDE 1)
 2X1 CHF-A (SIDE 2)

9 Plug-in and Removal of an OSFP Module

9.1 Insertion, Extraction, and Retention Forces for an OSFP Module

Table 9-1: Insertion, extraction, and retention forces for an OSFP module

| Measurement | Minimum | Maximum | Units | Comments |
|-------------------------------|---------|------------|-------|---|
| OSFP Module Insertion | N/A | 40 (55) | N | Module to be inserted into connector and cage with latch mechanism engaged. (55N if the cage has riding heatsink) |
| OSFP Module Extraction | N/A | 30 (45) | N | Module to be removed from connector and cage with latching mechanism disengaged. (45N if the cage has riding heatsink) |
| OSFP Module Retention in Cage | 125 | N/A | N | No functional damage to module, connector, or cage with latching mechanism activated. |

9.2 Durability

The required number of insertion and removal cycles as applicable to the OSFP module and its mating connector and cage are found in Table 9-2. The general requirement as applied to the values in the table is that no functional damage shall occur to the module, connector or cage.

Table 9-2: Durability

| Insertion/Removal Cycles into Connector/Cage | Minimum (cycles) | Comments |
|--|------------------|--|
| Module Cycles | 50 | Number of cycles for an individual module, to be tested with cage, connector, and module; latches may be locked out during testing |
| Connector/Cage Cycles | 100 | Number of cycles for the connector and cage with multiple modules, to be tested with cage, connector, and module; latches may be locked out during testing |

10 Thermal Performance

10.1 OSFP Module Thermal Requirements

The OSFP module shall operate within one or more of the case temperature ranges defined in Table 10-1. The temperature ranges are applicable between 60m below sea level and 1800m above sea level.

The module supplier is responsible for defining a location in the module where the case temperature be measured or monitored. An internal component with the least thermal margin will be connected to this location.

Table 10-1: Temperature range classes

| Class | Case Temperature |
|------------|--|
| Standard | 0 through 70°C |
| Reduced | 20 through 60°C |
| Extended | -5 through 85°C |
| Industrial | -40 through 85°C |
| Custom | Custom temperature range. Module shall be able to post temperature range to host via management interface. |

Table 10-1 defines case temperature only. For reference, touch temperature is controlled by regulatory requirements for handling and incidental contact defined section 3.9.

10.2 OSFP Connector Thermal Requirements

The OSFP connector is required to achieve the following thermal requirements while sustaining maximum power as defined in section 13.6.

Table 10-2: OSFP Connector Thermal Requirements

| Parameter | Value |
|---|----------|
| Life Expectancy | 10 years |
| Maximum Ambient Temperature | 65 °C |
| Maximum Temperature Rise of connector when all signal and power contacts energized simultaneously | 30 °C |

10.3 OSFP Module Airflow Impedance Curve

Figure 10-1 shows a typical airflow impedance range of an OSFP (module only) as measured along or through its heat sink. This typical range of airflow impedance can be used as a reference in an OSFP module's heat sink design and system design.

Figure 10-1: Target range of impediment to airflow of an OSFP module (20C, Sea Level)

10.4 Module Airflow Impedance Test Jig

The impedance range of Figure 10-1 was created using a jig as shown in Figure 10-2 and Figure 10-3. The jig is designed to support airflow along the heat sink as well as leakage around the module. The positive stop located within the jig reproduces the assembled condition within a host port. For a Type 2 module, it is normal for the front of the module to protrude beyond the jig opening. A Type 3 module may or may not extend beyond the jig opening.

Figure 10-2: Impedance test setup for Type 1 and Type 2 OSFP module
(Shown with Type 1)

Figure 10-3: Impedance test jig for Type 1 and Type 2 OSFP

Figure 10-4: Impedance test jig for Type 3 OSFP

Figure 10-5: Impedance test setup for Type 1, Type 2 and Type 3 OSFP

11 OSFP Riding Heat Sink Module and Cage Mechanical Specification

11.1 Overview

OSFP Riding Heat Sink (OSFP-RHS) is a 9.5mm high pluggable module which does not have an integrated heat sink as shown in the Figure 11-1 and Figure 11-2. In place of OSFP's integrated heat sink, OSFP-RHS cage shall have a riding heat sink. To prevent insertion of OSFP-RHS into a standard OSFP cage, the shape and location of the positive stop has been changed. See Table 11-1 for a comparison between the OSFP-RHS and OSFP.

Figure 11-1: Side view of a typical OSFP (top) and a typical OSFP-RHS (bottom)

Figure 11-2: OSFP-RHS cage only (left) and OSFP-RHS cage with module and riding heat sink (right)

Table 11-1: Comparison of OSFP-RHS to OSFP

| OSFP-RHS feature | Comment |
|-------------------------------------|---|
| Module | 9.5mm height without heat sink and different positive stop; for the feature which is not explicitly specified for OSFP-RHS, same specification as of OSFP shall be applied. |
| Connector | Identical with Surface Mount Connector |
| Host PCB Board Layout | Identical with Surface Mount type |
| Cage | Port height/positive stop/bezel cutout is different with OSFP |
| Insertion/Extraction/Retention | No change; see Table 9-1 |
| Durability | Identical with OSFP |
| Thermal Requirement | Identical with OSFP |
| Airflow Requirement | Not applicable (Section 10.2 is not applied) |
| Electrical and Management interface | Identical with OSFP |

In the following sections, the dimensions of the OSFP-RHS will be defined.

11.2 OSFP-RHS Module Mechanical Specification

Figure 11-3 shows the overall dimension of an OSFP-RHS module from a top view. The reference datum definition is identical with Table 3-1, but note that the location of the datum B (forward stop of the module) is shifted 6mm to prevent an OSFP-RHS from being fully inserted into an OSFP cage as described in section 4 or 5.

NOTES:

- [1] FRONT OF THE MODULE, PULL TAB AND OTHER COMPONENTS CAN EXTEND 1.60mm MAX FROM THE BOTTOM AND 13.1mm MAX FROM THE BOTTOM WITH UP TO 22.93mm WIDTH IN THE MAX ENVELOPE SHOWN.
- [2] INDICATED SURFACES (ALL 4 SIDES) TO BE CONDUCTIVE FOR CONNECTION TO CHASSIS GROUND.
- [3] APPLIES FROM THE TOP OF THE MODULE TO THE BOTTOM OF THE MODULE, INSIDE THE CAGE.
- [4] SURFACE TO BE THERMALLY CONDUCTIVE. REFER SECTION 9.4 FOR FLATNESS AND ROUGHNESS REQUIREMENTS.

Figure 11-3: Overview of the OSFP-RHS and heat sink contact area

Figure 11-4: Corner radius of OSFP-RHS in back view

Figure 11-5: OSFP-RHS forward stop

Figure 11-6: Connector keep out area in side view

Figure 11-7: Nose of OSFP-RHS

Figure 11-8: Paddle card position (bottom view of module) and module nose width

Figure 11-9: Location of inspection holes

Figure 11-10: Signal pad location with respect to the forward stop

Figure 11-11: Latch pocket details of an OSFP-RHS (See section 3.7 for latch cross-section)

11.3 OSFP-RHS Paddle Card

Interface of the paddle card which mate with connector of an OSFP-RHS is identical with OSFP. Note that, as shown in the Figure 11-12, the shallow neck and the component place avoid area is not required in the OSFP-RHS. This is because the positive stop of the OSFP-RHS is shifted to the rear side of the module.

Figure 11-12: Paddle card of an OSFP-RHS

11.4 OSFP-RHS Thermal Interface Surface Requirements

The thermally conductive area of an OSFP-RHS, as in the Figure 11-3, shall be compliant with specifications in Table 11-2.

Table 11-2: Surface flatness and roughness of the thermally conductive area

| OSFP-RHS Power (Max) | Surface Flatness | Surface Roughness |
|--|------------------|--------------------|
| Equal or less than 5W | 0.15mm or better | Ra 3.2μm or better |
| More than 5W | 0.12mm or better | Ra 1.6μm or better |
| Recommended for module with more than 14W (Optional) | 0.05mm or better | Ra 0.8μm or better |

11.5 OSFP-RHS Cage Mechanical Specification

An OSFP-RHS cage has a lower height than an OSFP cage and makes use of a riding heat sink for cooling. The forward stop feature in an OSFP-RHS cage is shifted compared with an OSFP cage to match with an OSFP-RHS module. See Figure 11-13 to Figure 11-19 for the mechanical specification of the cage for OSFP-RHS. The host PCB footprint is identical with OSFP. Its latch feature is identical, except its geometrical reference (forward stop) has been moved.

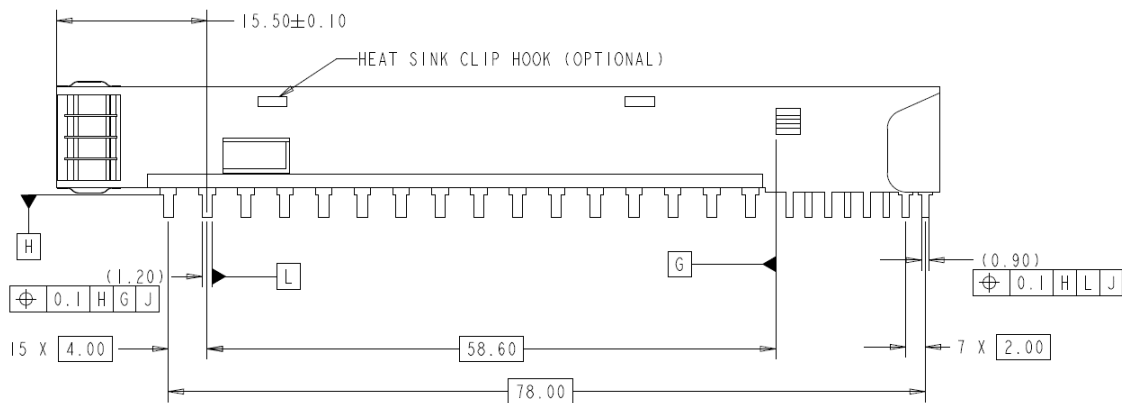

Figure 11-13: Cage positioning pins and forward stop

Figure 11-14: Side view of a 1x1 cage with vertical cage dimensions

Figure 11-15: Keying feature in OSFP-RHS

Figure 11-16: Internal width and centerline datum

Figure 11-17: Latch feature for OSFP-RHS cage

Figure 11-18: Cutout for a riding heat sink in the OSFP-RHS cage

Figure 11-19: Bezel cutout for the OSFP-RHS cage

11.6 Maximum Heat Sink Down Force for an OSFP-RHS Cage

The cage should be designed so that the force which will be applied from the riding heat sink to an OSFP-RHS module should not exceed 50N downward.

11.7 Custom Height OSFP-RHS

There may be a custom OSFP-RHS with height different than 9.5mm but otherwise having all other attributes of OSFP-RHS. Details of such custom height OSFP-RHS are not provided in this specification.

12 Optical PMD Block Diagrams

Below sub-sections illustrate block diagrams for a sampling of optical physical medium dependent sublayers (PMDs) that can be realized in an OSFP form factor. These block diagrams are meant to serve as guidelines for better understanding of the form factor and are by no means exhaustive.

12.1 400G PDM Block Diagrams

12.1.1 Optical PMD for parallel single mode fiber: 400G-DR4

12.4 OSFP Optical Interface

Optical interfaces that can be used for the OSFP modules are illustrated below. These interfaces are meant to be guideline. The centerline of the optical interface to be aligned with module centerline within 2mm.

12.4.1 Duplex LC Optical Interface

Figure 12-27 shows channel orientation of the optical connector when a duplex LC connector as in IEC 61754-20 is used in an OSFP module. The view is from the front of a typical OSFP module, but actual OSFP module design of the heat sink or height of the optical connector may be different from shown.

Figure 12-27: Optical receptacle and channel orientation for duplex LC connector

12.4.2 MPO-12 Optical Interface

Figure 12-28 shows channel orientation of the optical connector when a male MPO-12 connector as in the IEC 61754-7-1 is used in an OSFP module for applications except 400G-SR4.2.

Figure 12-28: Optical receptacle and channel orientation for MPO-12 connector

Figure 12-29 shows the channel orientation of the optical connector and signal lane mapping when a male MPO-12 connector is used in an OSFP module for 400G-SR4.2 application. There are two signals on two different wavelengths traveling on opposite directions inside each single fiber, as in the example shown in the section 12.1.3.

Figure 12-29: Optical receptacle and channel orientation for MPO-12 for 400G-SR4.2

Fiber connectors that have the same footprint as the MPO connector, such as AirMT®, or 3M EBO-MP12/16, will use the same guideline for channel orientation as the MPO interface as in this section and 12.4.3, 12.4.4 and 12.4.11.

12.4.3 MPO-16 Optical Interface

Figure 12-30 shows channel orientation of the optical connector when a male MPO-16 connector as in the TIA-604-18 is used in an OSFP module.

Figure 12-30: Optical receptacle and channel orientation for MPO-16 connector

12.4.4 MPO-12 Two Row Optical Interface

Figure 12-31 shows channel orientation of the optical connector when a male MPO-12 Two Row connector as in the TIA-604-18 is used in an OSFP module.

Figure 12-31: Optical receptacle and channel orientation for MPO-12 Two Row connector

12.4.5 MXC Optical Interface

Figure 12-32 shows channel orientation of a MXC connector with 16 fibers when it is used in the OSFP module.

Figure 12-32: Optical receptacle and channel orientation for MXC connector

12.4.6 Dual Mini-LC Optical Interface

Figure 12-33 shows channel orientation of the optical connector when two Mini-LC connectors are used in side by side, consisting a dual mini-LC for an OSFP module. Drawing below shows 11.35mm of pitch between the mini duplex LC connectors. Note that the allowable size of the mating optical connector can be affected by the pitch of the ports on the module design and the optical connector design.

Figure 12-33: Optical receptacle and channel orientation for Dual Mini-LC

12.4.7 Dual Duplex LC Optical Interface

Figure 12-34 shows channel orientation of the optical connector when two duplex LC connectors are used as belly to belly, consisting of a dual duplex LC for an OSFP module.

Note that the allowable size of the mating optical connector can be affected by the pitch of the ports on the module design and the optical connector design. Figure 12-35 depicts the limitation of the size of the LC connector, if there is no interference with the latch release mechanism. This configuration might be implemented in a Type 2 OSFP, as depicted in the Figure 3-3 and Figure 12-34.

Figure 12-34: Optical receptacle and channel orientation for Dual LC, with an example

Figure 12-35: LC connector size requirement per given belly-to-belly pitch

12.4.8 Dual CS® Optical Interface

Figure 12-36 shows channel orientation of the optical connector when a dual CS® connector is used in an OSFP module. Receptacle 1 (Tx1, Rx1) and receptacle 2 (Tx2, Rx2) are connected with two separate independent duplex fiber cables.

Figure 12-36: Optical receptacle and channel orientation for dual CS® connector

12.4.9 Quad MDC Optical Interface

Figure 12-37 shows channel orientation of the optical connector when a quad MDC connector is used in an OSFP module. Receptacle 1 (Tx1, Rx1), receptacle 2 (Tx2, Rx2), receptacle 3 (Tx3, Rx3), and receptacle 4 (Tx4, Rx4) are connected with four separate independent duplex fiber cables. Figure 12-38 shows for the 400G-SR4.2.

Figure 12-37: Optical receptacle and channel orientation for quad MDC connector for 400G DR-4

Figure 12-38: Optical receptacle and channel orientation for quad MDC connector for 400G-SR4.2

12.4.10 Quad SN[®] Optical Interface

Figure 12-39 and Figure 12-40 shows channel orientation of the optical connector when a quad SN[®] connector is used in an OSFP module. Receptacle 1 (Tx1, Rx1), receptacle 2 (Tx2, Rx2), receptacle 3 (Tx3, Rx3), and receptacle 4 (Tx4, Rx4) are connected with four separate independent duplex fiber cables.

Figure 12-39: Optical receptacle and channel orientation for Quad SN[®] connector for 400G-DR4

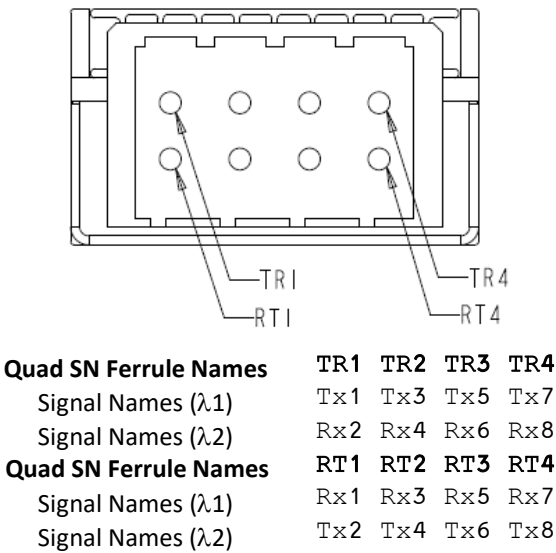

Figure 12-40: Optical receptacle and channel orientation for Quad SN[®] connector for 400G SR4.2

12.4.11 Dual MPO Optical Interface

Figure 12-41 shows channel orientation of the optical connector when dual MPO-12 connectors are used in an OSFP module. MPO-12 connectors, which channel assignment within the connector to be as in the Figure 12-28, will be used as depicted in the figure. Note that the allowable size of the mating optical connector can be affected by the pitch of the ports on the module design and the optical connector design, as in the Figure 12-42. This configuration might be implemented in a Type 2 OSFP, as depicted in the Figure 3-3 and Figure 12-43.

Figure 12-41: Optical receptacle and channel orientation for Dual MPO connector

Figure 12-42: MPO connector size requirement per given belly-to-belly pitch

Figure 12-43: Example of an OSFP module with Dual MPO connector

12.4.12 Dual MXC Optical Interface

Figure 12-44 shows channel orientation of the optical connector when dual MXC connectors are used in an OSFP module. Connector 1 will be used for the first half of the channels of the module (TX1~4 and RX 1~4) while the Connector 2 will be used for the second half of the channels of the module (TX5~8 and RX 5~8). Figure 12-45 shows an example of OSFP with dual MXC connectors. This configuration might be implemented in a Type 2 OSFP, as depicted in the Figure 3-3.

Figure 12-44: Optical receptacle and channel orientation for Dual MXC connector

Figure 12-45: Example of an OSFP module with Dual MXC connector

12.4.13 8 x MDC Optical Interface

In addition to the section 12.4.9, 8 MDC connectors can be placed to an OSFP module as in the Figure 12-46. This configuration might be implemented in a Type 3 OSFP, as depicted in the Figure 3-3 and Figure 12-47.

Figure 12-46: Optical receptacle and channel orientation for 8 x MDC connector

Figure 12-47: Example of a Type 3 OSFP with 8 x MDC connector

12.4.14 8 x SN[®] Optical Interface

In addition to the section 12.4.9, 8 SN[®] connectors can be placed to an OSFP module as in the Figure 12-48. This configuration might be implemented in a Type 3 OSFP, as depicted in the Figure 3-3.

Figure 12-48: Optical receptacle and channel orientation for 8 x SN[®] connector

Figure 12-49: Example of a Type 3 module with 8 x SN[®] connector

13 Electrical Interface

13.1 Module Electrical Connector

The electrical interface of an OSFP module consists of a 60 contacts edge connector as illustrated by the diagram in Figure 13-1. It provides 16 contacts for 8 differential pairs of high-speed transmit signals, 16 contacts for 8 differential pairs of high-speed receive signals, 4 contacts for low-speed control signals, 4 contacts for power and 20 contacts for ground.

The edge connector pads have 3 different pad lengths to enable sequencing of the contacts to protect the module against electrostatic discharge (ESD) and provide reliable power up/power down sequencing for the module during insertion and removal. The ground pads are the longest for first contact, the power pads are the second longest for second contact and the signal pads are the third longest for final contact during insertion.

The chassis ground (case common) of the OSFP module shall be isolated from the module's circuit ground, GND, to provide the equipment designer flexibility regarding connections between external electromagnetic interference shields and circuit ground, GND, of the module. When an OSFP module is not installed, the signals to the connector within the unused cage should be disabled to minimize electromagnetic interference (EMI) emissions.

Figure 13-1: OSFP module pinout

13.2 Pin Descriptions

Table 13-1: OSFP module signal pin descriptions

| Name | Direction | Description |
|-----------|-----------|--|
| TX[8:1]p | input | Transmit differential pairs from host to module. |
| TX[8:1]n | input | |
| RX[8:1]p | output | Receive differential pairs from module to host. |
| RX[8:1]n | output | |
| SCL | bidir | 2-wire serial clock signal. Requires pull-up resistor to 3.3V on host. |
| SDA | bidir | 2-wire serial data signal. Requires pull-up resistor to 3.3V on host. |
| LPWn/PRSn | bidir | Multi-level signal for low power control from host to module and module presence indication from module to host. This signal requires the circuit as described in Section 13.5.3 |
| INT/RSTn | bidir | Multi-level signal for interrupt request from module to host and reset control from host to module. This signal requires the circuit as described in Section 13.5.2 |
| VCC | power | 3.3V power for module. |
| GND | ground | Module Ground. Logic and power return path. |

13.3 Pin List

Table 13-2: OSFP connector pin list

| Pin# | Symbol | Description | Logic | Direction | Plug Sequence | Notes |
|------|-----------|---------------------------------|-------------|-----------------|---------------|--|
| 1 | GND | Ground | | | 1 | |
| 2 | TX2p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 3 | TX2n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 4 | GND | Ground | | | 1 | |
| 5 | TX4p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 6 | TX4n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 7 | GND | Ground | | | 1 | |
| 8 | TX6p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 9 | TX6n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 10 | GND | Ground | | | 1 | |
| 11 | TX8p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 12 | TX8n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 13 | GND | Ground | | | 1 | |
| 14 | SCL | 2-wire Serial interface clock | LVC MOS-I/O | Bi-directional | 3 | Open-Drain with pull-up resistor on Host |
| 15 | VCC | +3.3V Power | | Power from Host | 2 | |
| 16 | VCC | +3.3V Power | | Power from Host | 2 | |
| 17 | LPWn/PRSn | Low-Power Mode / Module Present | Multi-Level | Bi-directional | 3 | See pin description for required circuit |
| 18 | GND | Ground | | | 1 | |
| 19 | RX7n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 20 | RX7p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 21 | GND | Ground | | | 1 | |
| 22 | RX5n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 23 | RX5p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 24 | GND | Ground | | | 1 | |
| 25 | RX3n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 26 | RX3p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 27 | GND | Ground | | | 1 | |
| 28 | RX1n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 29 | RX1p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 30 | GND | Ground | | | 1 | |

| Pin# | Symbol | Description | Logic | Direction | Plug Sequence | Notes |
|------|----------|---------------------------------|-------------|-----------------|---------------|--|
| 31 | GND | Ground | | | 1 | |
| 32 | RX2p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 33 | RX2n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 34 | GND | Ground | | | 1 | |
| 35 | RX4p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 36 | RX4n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 37 | GND | Ground | | | 1 | |
| 38 | RX6p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 39 | RX6n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 40 | GND | Ground | | | 1 | |
| 41 | RX8p | Receiver Data Non-Inverted | CML-O | Output to Host | 3 | |
| 42 | RX8n | Receiver Data Inverted | CML-O | Output to Host | 3 | |
| 43 | GND | Ground | | | 1 | |
| 44 | INT/RSTn | Module Interrupt / Module Reset | Multi-Level | Bi-directional | 3 | See pin description for required circuit |
| 45 | VCC | +3.3V Power | | Power from Host | 2 | |
| 46 | VCC | +3.3V Power | | Power from Host | 2 | |
| 47 | SDA | 2-wire Serial interface data | LVC MOS-I/O | Bi-directional | 3 | Open-Drain with pull-up resistor on Host |
| 48 | GND | Ground | | | 1 | |
| 49 | TX7n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 50 | TX7p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 51 | GND | Ground | | | 1 | |
| 52 | TX5n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 53 | TX5p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 54 | GND | Ground | | | 1 | |
| 55 | TX3n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 56 | TX3p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 57 | GND | Ground | | | 1 | |
| 58 | TX1n | Transmitter Data Inverted | CML-I | Input from Host | 3 | |
| 59 | TX1p | Transmitter Data Non-Inverted | CML-I | Input from Host | 3 | |
| 60 | GND | Ground | | | 1 | |

13.4 High-Speed Signals

The high-speed signals consist of 8 transmit and 8 receive differential pairs identified as TX[8:1]p / TX[8:1]n and RX[8:1]p / RX[8:1]n. These signals can be operated in port configurations of either a single 8-lanes, dual 4-lanes, quad 2-lanes or 8 individual lanes depending on the capability of the host ASIC.

1.6TAUI-8 mode provides 8 differential lanes using 224G-PAM4 signaling operating at 106.25 Gbaud. This results in 8 lanes of 200Gb/s for a total of 1.6Tb/s. This mode allows for connection to PMD configurations of 1x1.6T, 2x800G, 4x400G, or 8x200G.

800GAUI-8 mode provides 8 differential lanes using 112G-PAM4 signaling operating at 53.125 Gbaud. This results in 8 lanes of 100Gb/s for a total of 800Gb/s. This mode allows connection to PMD configurations of 1x800G, 2x400G, 4x200G or 8x100G.

400GAUI-8 mode provides 8 differential lanes using 56G-PAM4 signaling operating at 26.5625 Gbaud. This results in 8 lanes of 50Gb/s for a total of 400Gb/s. This mode allows connection to PMD configurations of 1x400G, 2x200G, 4x100G or 8x50G.

Dual CAUI-4 mode provides 8 differential lanes using 25G-NRZ signaling operating at 25.78125 Gbaud. This results in 8 lanes of 25Gb/s for a total of 200Gb/s. This mode allows connection to PMD configurations of 2x100G, 4x50G or 8x25G.

The high-speed signals follow the electrical specifications of IEEE802.3bs, IEEE802.3cd, IEEE 802.3ck and CEI-56G-VSR-PAM4 as defined in OIF-CEI-5.0 for 400GAUI-8 mode and IEEE802.3bj, IEEE802.3bm for CAUI-4 mode.

The lane assignments in Table 13-3 shall be used for the different PMD configurations.

Table 13-3: High-speed signal lane mapping

(*L means Lane, L1 means Lane 1 in the port.)

| PMD Configuration | Transmit and Receive Lane Assignments | | | | | | | |
|---|---------------------------------------|--------|--------|--------|--------|--------|--------|--------|
| | L1 | L2 | L3 | L4 | L5 | L6 | L7 | L8 |
| 1x1.6T (224G-PAM4) 1x800G (112G-PAM4) 1x400G (56G-PAM4) | Port 1 | | | | | | | |
| 2x800G (224G-PAM4) 2x400G (112G-PAM4) 2x200G (56G-PAM4) 2x100G (25G-NRZ) | L1* | L2 | L3 | L4 | L1 | L2 | L3 | L4 |
| 4x400G (224G-PAM4) 4x200G (112G-PAM4) 4x100G (56G-PAM4) 4x50G (25G-NRZ) | L1 | L2 | L1 | L2 | L1 | L2 | L1 | L2 |
| 8x200G (224G-PAM4) 8x100G (112G-PAM4) 8x50G (56G-PAM4) 8x25G (25G-NRZ) | Port 1 | Port 2 | Port 3 | Port 4 | Port 5 | Port 6 | Port 7 | Port 8 |

13.5 Low-Speed Signals

There are 4 low-speed signals consisting of SCL, SDA, LPWn/PRSn and INT/RSTn. These signals are used for configuration and control of the module by the host. SCL and SDA use 3.3V LVCMOS levels and are bidirectional signals. LPWn/PRSn and INT/RSTn have additional circuitry on the host and module to enable multi-level bidirectional signaling.

13.5.1 SCL and SDA

SCL and SDA are a 2-wire serial interface between the host and module using the I²C or I3C protocols. SCL is defined as the serial interface clock signal and SDA as the serial interface data signal. Both signals are open-drain and require pull-up resistors to +3.3V on the host. The pull-up resistor value shall be 1k ohms to 4.7k ohms depending on capacitive load.

This 2-wire interface supports bus speeds:

- Required - I²C Fast-mode (Fm) \leq 400 kbit/s
- Optional - I²C Fast-mode Plus (Fm+) \leq 1 Mbit/s
- Optional - I3C Single Data Rate (SDR) \leq 12.5 Mbit/s

The host shall default to using 100 kbit/s standard-mode I²C when first accessing an unidentified module for backward compatibility. Once the module has been brought out of reset, the host can read the module's 2-wire interface speed register to determine the maximum supported speed the module allows. For an OSFP, the host may then use I²C Fast-mode, I²C Fast-mode Plus or I3C Single Data Rate, as indicated by the module. It is optional for the host to change the speed of the 2-wire interface but remaining at a low speed could lead to slow management transactions for modules that require frequent accesses.

SCL and SDA signals follow the electrical specifications of Fast-mode, and Fast-mode Plus as defined in the I²C-bus specification or Single Data Rate mode as defined in the Specification for I3C.

13.5.2 INT/RSTn

INT/RSTn is a dual function signal that allows the module to raise an interrupt to the host and also allows the host to reset the module. The circuit shown in Figure 13-3 enables multi-level signaling to provide direct signal control in both directions. Reset is an active-low signal on the host which is translated to an active-low signal on the module. Interrupt is an active-high signal on the module which gets translated to an active-high signal on the host.

The INT/RSTn signal operates in 3 voltage zones to indicate the state of Reset for the module and Interrupt for the host. Figure 13-2 shows these 3 zones. The host uses a voltage reference at 2.5 volts to determine the state of the H_INT signal and the module uses a voltage reference at 1.25V to determine the state of the M_RSTn signal.

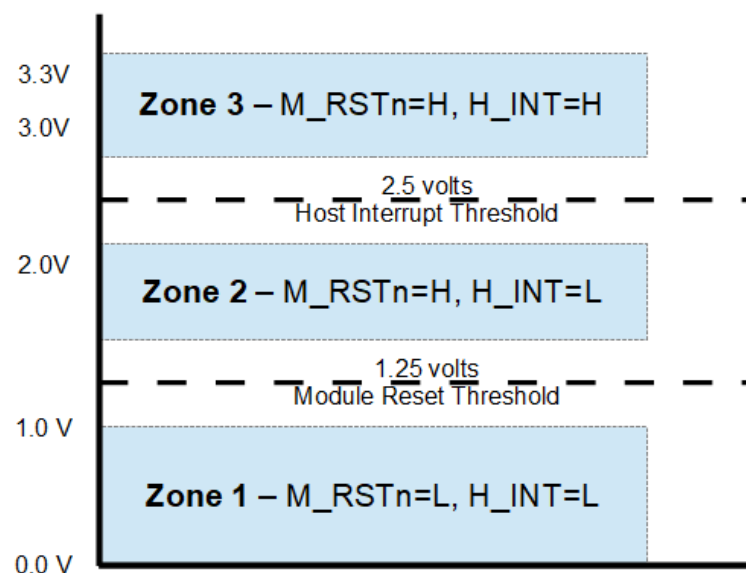

Figure 13-2: INT/RSTn voltage zones

- Zone 1 – Reset operation – Zone 1 is the state when the module is in reset and interrupt deasserted (M_RSTn=Low, H_INT=Low). The min/max voltages for Zone 1 are defined by parameters V_INT/RSTn_1 and V_INT/RSTn_2 in Table 13-4.
- Zone 2 – Normal operation – Zone 2 is the normal operating state with reset deasserted (M_RSTn=High) and interrupt deasserted (H_INT=Low). The min/max voltages for Zone 2 are defined by parameter V_INT/RSTn_3 in Table 13-4.
- Zone 3 – Interrupt operation – Zone 3 is the state for the module to assert interrupt and the module must also be out of reset (M_RSTn=High, H_INT=High). The min/max voltages for Zone 3 are defined by parameter V_INT/RSTn_4 in Table 13-4.

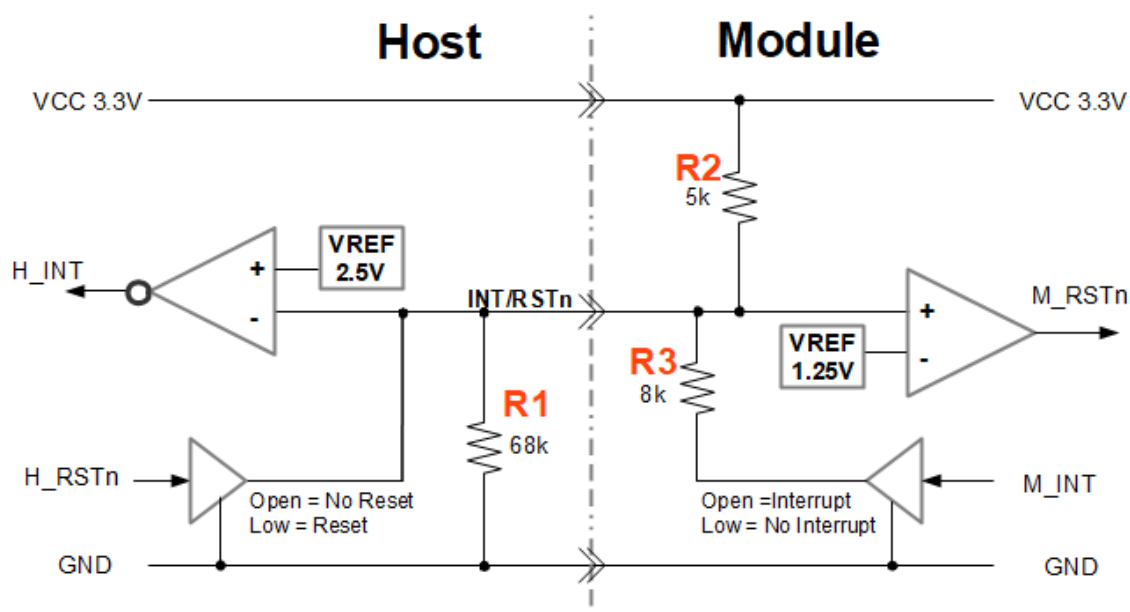

Figure 13-3: INT/RSTn circuit

Table 13-4: INT/RSTn circuit parameters

| Parameter | Nominal | Min | Max | Units | Note |
|--------------|---------|-------|-------|-------|--|
| Host VCC | 3.300 | 3.135 | 3.465 | Volts | VCC voltage on the Host |
| H_Vref_INT | 2.500 | 2.475 | 2.525 | Volts | Precision voltage reference for H_INT |
| M_Vref_RSTn | 1.250 | 1.238 | 1.263 | Volts | Precision voltage reference for M_RSTn |
| R1 | 68k | 66k | 70k | Ohms | Recommend 68.1k ohms 1% resistor |
| R2 | 5k | 4.9k | 5.1k | Ohms | Recommend 4.99k ohms 1% resistor |
| R3 | 8k | 7.8k | 8.2k | Ohms | Recommend 8.06k ohms 1% resistor |
| V_INT/RSTn_1 | 0.000 | 0.000 | 1.000 | Volts | INT/RSTn voltage for No Module |
| V_INT/RSTn_2 | 0.000 | 0.000 | 1.000 | Volts | INT/RSTn voltage for Module installed, H_RSTn=Low |
| V_INT/RSTn_3 | 1.900 | 1.500 | 2.250 | Volts | INT/RSTn voltage for Module installed, H_RSTn=High, M_INT=Low |
| V_INT/RSTn_4 | 3.000 | 2.750 | 3.465 | Volts | INT/RSTn voltage for Module installed, H_RSTn=High, M_INT=High |

The description of the H_INT signal has been updated starting with MSA revision 5.0. The functionality and implementation has not changed but the description has been updated to use the non-inverted signal (H_INT) instead of the inverted signal (H_INTn). This makes the polarity of the interrupt signal the same between the module (M_INT) and host (H_INT) for better clarity. This is purely a description change with no change to functionality. Host implementations with an inverted interrupt signal are fully OSFP MSA specification compliant.

13.5.3 LPWn/PRSn

LPWn/PRSn is a dual function signal that allows the host to signal Low Power mode and the module to indicate Module Present. The circuit shown in Figure 13-5 enables multi-level signaling to provide direct signal control in both directions. Low Power mode is an active-low signal on the host which gets converted to an active-low signal on the module. Module Present is controlled by a pull-down resistor on the module which gets converted to an active-low logic signal on the host.

The LPWn/PRSn signal operates in 3 voltage zones to indicate the state of Low Power mode for the module and Module Present for the host. Figure 13-4 shows these 3 zones. The host uses a voltage reference at 2.5 volts to determine the state of the H_PRSn signal and the module uses a voltage reference at 1.25V to determine the state of the M_LPWn signal.

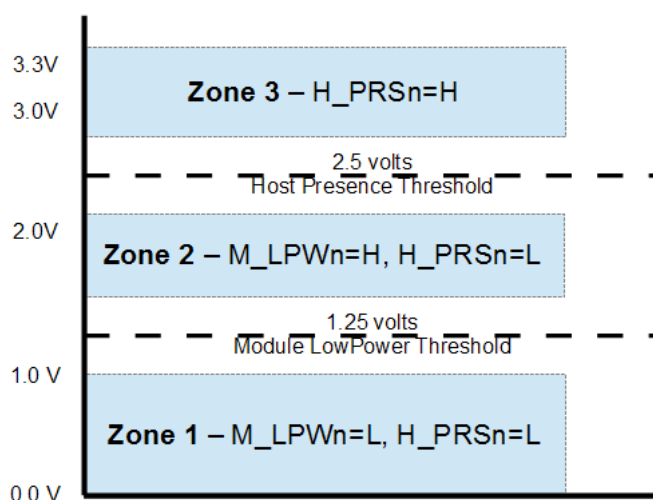

Figure 13-4: LPWn/PRSn voltage zones

- **Zone 1 – Low Power mode** – Zone 1 is the low power state and module is present (M_LPWn=Low, H_PRSn=Low). The min/max voltages for Zone 1 are defined by parameters V_LPWn/PRSn_1 in Table 13-5.
- **Zone 2 – High Power mode** – Zone 2 is the high power state and module is present (M_LPWn=High, H_PRSn=Low). The min/max voltages for Zone 2 are defined by parameters V_LPWn/PRSn_2 in Table 13-5.
- **Zone 3 – Module Not Present** – Zone 3 is the state for when the module is not present (H_PRSn=High). The min/max voltages for Zone 3 are defined by parameters V_LPWn/PRSn_3 in Table 13-5.

Module Removal – If the module is being unplugged and LPWn/PRSn loses contact, the pull-down resistor on the module shall assert Low Power mode on the module (M_LPWn=Low). The module is required to transition to low power (Power Class 1) and disable transmitters within the time specified by T_hplp in Table 13-7. This maximum transition time is to ensure the module is in Low Power mode before the power contacts lose connection to avoid potential damage from arcing.

The LPWn/PRSn signal is driven High or Open by the host for Low Power mode control. If logic is used to generate the High level then 3.3V LVCMOS is preferred.

For very low cost modules, such as DAC, the voltage comparator on the module may be omitted and the LPWn/PRSn pin shall in that case be tied to GND in the module. This type of module may only be used for low power mode (Power Class 1).

The module transmitters must be disabled when in Low Power mode. This ensures Power Class 1 and also provides a fast hardware shut down mechanism for applications such as redundancy switch-over. In addition, software controlled transmitter disable is provided by the TX Disable register via the I²C interface.

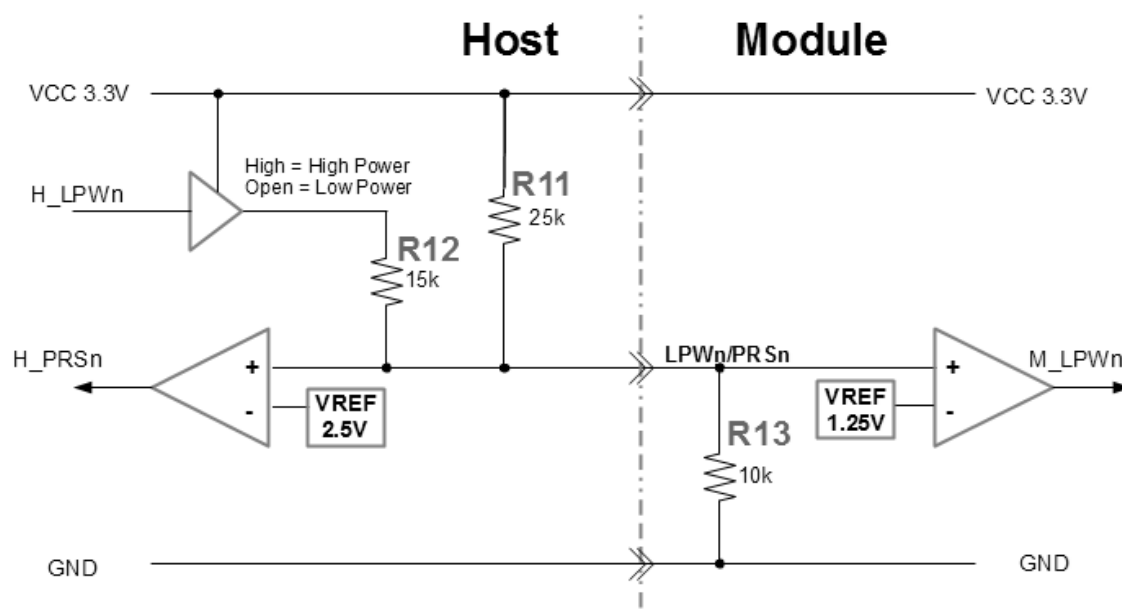

Figure 13-5: LPWn/PRSn circuit

Table 13-5: LPWn/PRSn circuit parameters

| Parameter | Nominal | Min | Max | Units | Note |
|---------------|---------|-------|-------|-------|---|
| Host VCC | 3.300 | 3.135 | 3.465 | Volts | VCC voltage on the Host |
| H_Vref_PRSn | 2.500 | 2.475 | 2.525 | Volts | Precision voltage reference for H_PRSn |
| M_Vref_LPWn | 1.250 | 1.238 | 1.263 | Volts | Precision voltage reference for M_LPWn |
| R11 | 25k | 24.5k | 25.5k | Ohms | Recommend 24.9k ohms 1% resistor |
| R12 | 15k | 14.7k | 15.3k | Ohms | Recommend 15k ohms 1% resistor |
| R13 | 10k | 9.8k | 10.2k | Ohms | Recommend 10k ohms 1% resistor |
| V_LPWn/PRSn_1 | 0.950 | 0.000 | 1.100 | Volts | LPWn/PRSn voltage for Module installed, H_LPWn=Low |
| V_LPWn/PRSn_2 | 1.700 | 1.400 | 2.250 | Volts | LPWn/PRSn voltage for Module installed, H_LPWn=High |
| V_LPWn/PRSn_3 | 3.300 | 2.750 | 3.465 | Volts | LPWn/PRSn voltage for No Module |

13.5.4 Timing for Control and Status Functions

The QSFP-DD specification should be followed for any timing of control and status functions that have not been defined in this specification.

13.5.5 OSFP Module Power Up Behavior

The OSFP module shall power up when system power is enabled or on module insertion or on VCC power enable to the module. Once powered, the module shall either wait in Low Power mode or enter High Power mode based on the state of the Reset signal, Low Power signal and ForceLowPwr bit of the module. The ForceLowPwr bit default is pre-programmed in the module by the manufacturer and typically would be set to 0. The host can change the ForceLowPwr bit after power up but it shall return to its pre-programmed default when the module is placed in reset or power cycled. The Reset and Low Power signals are described in sections 13.5.2 and 13.5.3. The ForceLowPwr bit is defined in the OSFP Management Interface Specification.

The table below shows the module power up state based on Low Power and ForceLowPwr. If LPWn=0 then the module shall go to low power mode and transmitters disabled. If ForceLowPwr=0 and LPWn=1 then the module shall immediately enable transmitters. If ForceLowPwr=1 and LPWn=1 then the module shall wait in Low Power mode until the host clears the ForceLowPwr bit for the module to enable transmitters.

Table 13-6: Power up behavior

| Module State | ForceLowPwr = 0 | ForceLowPwr = 1 |
|---|---|---|
| Low Power asserted (LPWn = 0) | Low Power Mode (transmitters Disabled) | Low Power Mode (transmitters Disabled) |
| Low Power de-asserted (LPWn = 1) | Operational (transmitters Enabled*) | Low Power Mode (transmitters Disabled) |

*The host may use the management interface to alter this default behavior

13.5.6 OSFP Module Reset Behavior

Reset is a hardware signal from the INT/RSTn pin as defined in section 13.5.2. Asserting Reset overrides all other hardware and software controls and forces the module into the Reset state. This includes forcing Low Power mode and disabling transmitters.

13.6 Power

+3.3V power is delivered to the module via 4 power pins (VCC). These 4 power pins shall be connected together on the module and also together on the host. Each power pin allows up to 2.5 Amps for a total of 10.0 Amps. This enables a maximum power in excess of 30 Watts.

The specification of the module power is in accordance with methods defined by SFF-8679 Rev 1.7 section 5.5. There are 8 power classes defined as shown in Table 13-8. All modules in reset or the default low power mode must comply with Power Class 1. High power mode enables the module to draw power up to its advertised power class, and may be conditionally enabled by the host. The host may read the module power class register to know the power class of the module before or after enabling high power mode. The module shall not exceed the power class it identifies for itself.

Transition between low and high power mode is controlled by the M_RSTn (reset) signal, M_LPWn (low power mode) signal and ForceLowPwr bit. The module shall remain in or transition to low power mode when M_LPWn or M_RSTn are asserted or the ForceLowPwr bit is set. While in low power mode, active modules shall also disable transmitters. The module may transition to high power mode once M_RSTn and M_LPWn are deasserted and the ForceLowPwr bit is cleared.

The specifications of Table 13-7 and Table 13-8 are for the combined power of all 4 power pins. The measurement location for these specifications is at the OSFP connector VCC pins on the host board.

Table 13-7: OSFP power specification

| Parameter | Symbol | Minimum | Nominal | Maximum | Units |
|---|---------------------|---------|---------|---------|-------|
| Module power supply voltage including ripple, droop and noise below 100 kHz | Vcc_Module | 3.135 | 3.300 | 3.465 | V |
| Host power supply voltage including ripple, droop and noise below 100 kHz | Vcc_Host | 3.201 | 3.300 | 3.465 | V |
| Voltage drop across mated connector (Vcc_Host minus Vcc_Module) | Vcc_drop | | | 66 | mV |
| Total current for Vcc pins (1) | Icc_module | | | 10.0 | A |
| Host RMS noise output 10 Hz-10 MHz | e _{N_Host} | | | 25 | mV |
| Module RMS noise output 10 Hz - 10 MHz | e _{N_Mod} | | | 15 | mV |
| Module inrush - instantaneous peak duration | T _{ip} | | | 50 | μs |
| Module inrush - initialization time | T _{init} | | | 500 | ms |
| Inrush and Discharge Current (2) | I _{didt} | | | 100 | mA/μs |
| High power mode to Low power mode transition time from assertion of M_LPWn or M_RSTn or ForceLowPwr | T _{hplp} | | | 200 | μs |

- (1) Utilization of the maximum OSFP power rating requires thermal design and validation at the system level to ensure the maximum connector temperature is not exceeded. A recommended design practice is to heatsink the host board power pin pads with multiple vias to a thick copper power plane for conductive cooling.
- (2) The specified Inrush and Discharge Current (I_{didt}) limit shall not be exceeded for all power transient events. This includes hot-plug, hot-unplug, power-up, power-down, initialization, low-power to high-power and high-power to low-power.

Table 13-8: OSFP power classes

| Parameter | Symbol | Minimum | Nominal | Maximum | Units |
|--|-----------|---------|---------|-----------|-------|
| Low Power Mode – M_LPWn or M_RSTn asserted or ForceLowPwr | | | | | |
| Power consumption | P_lp | | | 2 | W |
| Instantaneous peak current at hot plug | lcc_ip_lp | | | 800 | mA |
| Sustained peak current at hot plug | lcc_sp_lp | | | 666 | mA |
| Steady state current (1) | lcc_lp | | | 637 | mA |
| Power Class 1 module (high power mode) | | | | | |
| Power consumption | P_1 | | | 1.5 | W |
| Instantaneous peak current at hot plug | lcc_ip_1 | | | 600 | mA |
| Sustained peak current at hot plug | lcc_sp_1 | | | 500 | mA |
| Steady state current (1) | lcc_1 | | | 478 | mA |
| Power Class 2 module (high power mode) | | | | | |
| Power consumption | P_2 | | | 3.5 | W |
| Instantaneous peak current at high power enable | lcc_ip_2 | | | 1400 | mA |
| Sustained peak current at high power enable | lcc_sp_2 | | | 1167 | mA |
| Steady state current (1) | lcc_2 | | | 1116 | mA |
| Power Class 3 module (high power mode) | | | | | |
| Power consumption | P_3 | | | 7 | W |
| Instantaneous peak current at high power enable | lcc_ip_3 | | | 2800 | mA |
| Sustained peak current at high power enable | lcc_sp_3 | | | 2333 | mA |
| Steady state current (1) | lcc_3 | | | 2233 | mA |
| Power Class 4 module (high power mode) | | | | | |
| Power consumption | P_4 | | | 8 | W |
| Instantaneous peak current at high power enable | lcc_ip_4 | | | 3200 | mA |
| Sustained peak current at high power enable | lcc_sp_4 | | | 2666 | mA |
| Steady state current (1) | lcc_4 | | | 2552 | mA |
| Power Class 5 module (high power mode) | | | | | |
| Power consumption | P_5 | | | 10 | W |
| Instantaneous peak current at high power enable | lcc_ip_5 | | | 4000 | mA |
| Sustained peak current at high power enable | lcc_sp_5 | | | 3333 | mA |
| Steady state current (1) | lcc_5 | | | 3190 | mA |
| Power Class 6 module (high power mode) | | | | | |
| Power consumption | P_6 | | | 12 | W |
| Instantaneous peak current at high power enable | lcc_ip_6 | | | 4800 | mA |
| Sustained peak current at high power enable | lcc_sp_6 | | | 4000 | mA |
| Steady state current (1) | lcc_6 | | | 3828 | mA |
| Power Class 7 module (high power mode) | | | | | |
| Power consumption | P_7 | | | 14 | W |
| Instantaneous peak current at high power enable | lcc_ip_7 | | | 5600 | mA |
| Sustained peak current at high power enable | lcc_sp_7 | | | 4666 | mA |
| Steady state current (1) | lcc_7 | | | 4466 | mA |
| Power Class 8 module (high power mode) | | | | | |
| Power consumption | P_8 (2) | | | >14 | W |
| Instantaneous peak current at high power enable | lcc_ip_8 | | | P_8 * 400 | mA |
| Sustained peak current at high power enable | lcc_sp_8 | | | P_8 * 333 | mA |
| Steady state current (1) | lcc_8 | | | 7600 | mA |

- (1) Steady state current must not allow power consumption to exceed the specified maximum power for the selected power class.
- (2) Power consumption P_8 is readable from the module Max Power register as defined in the Management Specification.

As a reference, the maximum power allowed in the previous revisions in the OSFP MSA are listed in Table 13-9.

Table 13-9: OSFP power summary per MSA revision

| OSFP MSA Rev | Max Current | Max Power (at 3.3V nominal) |
|--------------|-------------|--------------------------------|
| 1.0 | 6 A | 19.8 W |
| 2.0 | 6.4 A | 21.1 W |
| 3.0 | 6.4 A | 21.1 W |
| 4.0 | 10 A | 33.0 W |
| 5.0 | 10 A | 33.0 W |

13.6.1 Power Filter

Figure 13-6 provides an example implementation for a 3.3V power filter on the host board. If an alternate circuit is used for power filtering then the same filter characteristics as this example filter shall be met.

Figure 13-6: Host board power filter circuit

13.6.2 Power Electronic Circuit Breaker (optional)

For safety and protection of the host system, the power to each OSFP module may be protected by an electronic circuit breaker on the host board which is enabled with the H_PRSn signal such that power is only enabled when the module is fully engaged into the OSFP connector.

13.7 OSFP Host Board and Module Block Diagram

Figure 13-7 is an example block diagram of the host board's connections to the OSFP module.

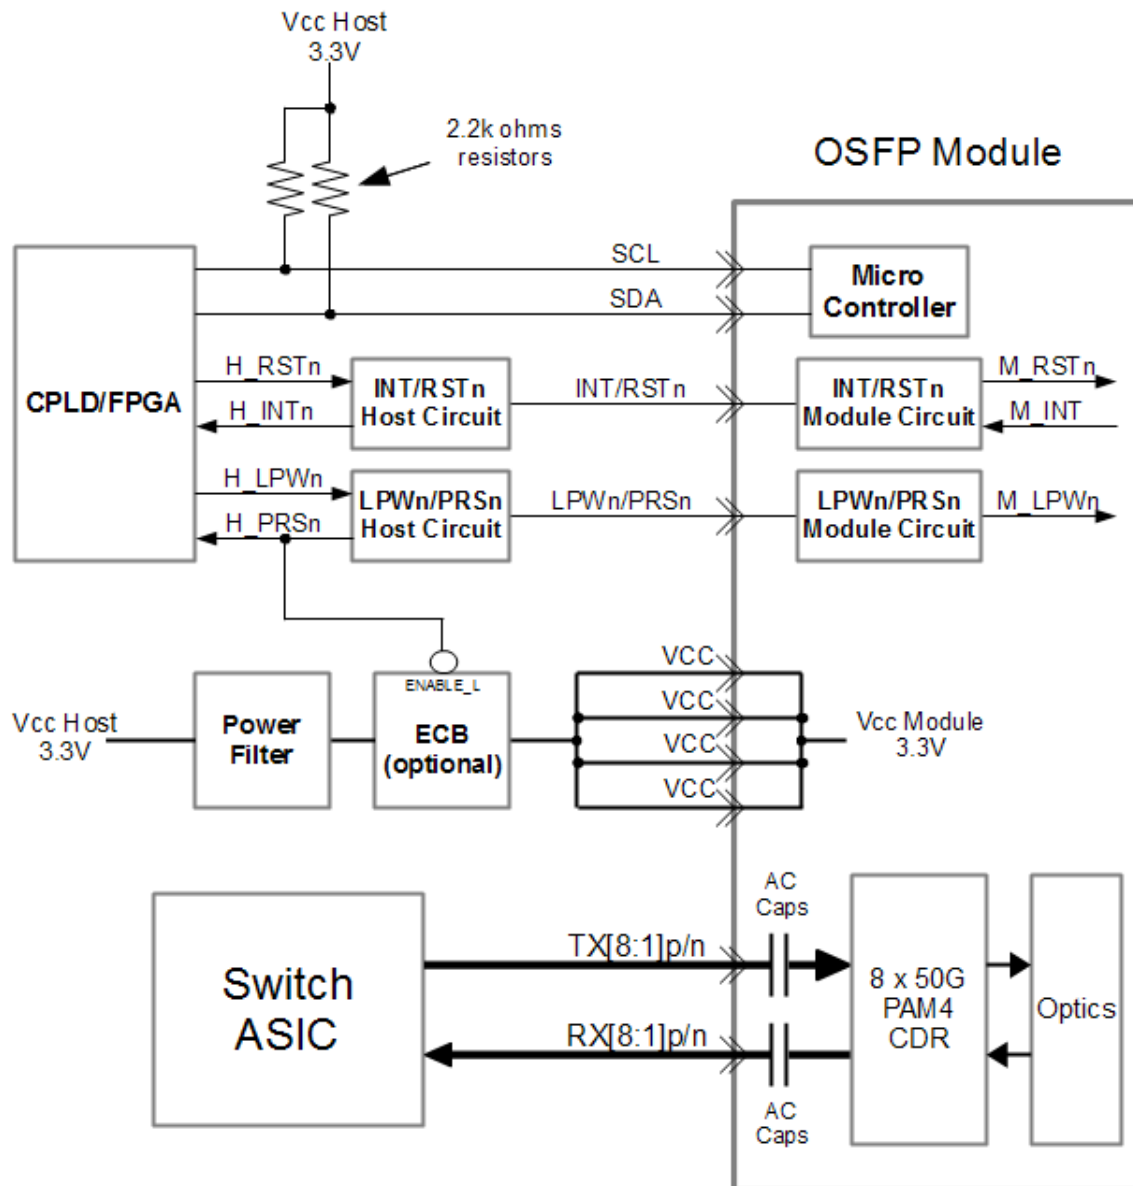

Figure 13-7: Host board and Module block diagram

13.8 Electrostatic Discharge (ESD)

Where ESD performance is not otherwise specified, the OSFP module shall meet ESD requirements given in EN61000-4-2, criterion B test specification when installed in a properly grounded cage and chassis. The units are subjected to 15kV air discharges during operation and 8kV direct contact discharges to the case.

The OSFP module and host high-speed signal, low-speed signal and power contacts shall withstand 1000 V electrostatic discharge based on Human Body Model per ANSI/ESDA/JEDEC JS-001.

Appendix A. OSFP Module LED (Informative)

A.1 LED Indicator and its Scheme

An OSFP module may have one or more LEDs at the front for use as a status indicator. In cases where a single LED is used for status indication of a multi-channel OSFP module, a green/yellow bi-color LED is recommended. In such case, the LED should light solid green when all channels of the module are operational and solid yellow when all channels are disabled. In cases where some channels are operational and some have fault conditions, a repeating pattern of LED flashing as outlined in Table A-1 is recommended.

Table A-1: Suggested OSFP LED signaling scheme for multiple channel modules

| LED Status | Indication |
|---|--|
| On for 0.22 seconds | Green indicates channel 1 operational; Yellow indicates channel 1 is non-operational or disabled. |
| Off for 0.22 seconds | Pause until LED indicates status of next channel. |
| On for 0.22 seconds | Green indicates channel 2 operational; Yellow indicates channel 2 is non-operational or disabled. |
| Off for 0.22 seconds | Pause until LED indicates status of next channel. |
| Pattern repeats to final (<i>n</i> th) port | ... |
| LED off for 1.76 seconds | Long pause for clear separation before pattern repeats from the beginning. |

Appendix B. OSFP Pull Tab Length (Informative)

B.1 OSFP Pull Tab Length

An OSFP module may have a pull tab. Figure B-1 to B-3 show reference pull tab lengths with respect to the module positive stop. Note that this does not apply to passive copper cables.

Figure B-1: Type 1 OSFP module lengths with pull tab

Figure B-2: Type 2 or Type 3 OSFP with pull tab

Figure B-3: OSFP-RHS module lengths with pull tab

Appendix C. OSFP with heatsink on the bottom

C.1 Bottom heatsink dimensions

The OSFP module is permitted to have an integrated heatsink on the bottom side for improved thermal control. Figure C-1 and Figure C-2 depict the OSFP module bottom side integrated heatsink design and fin placement. Figure C-3 provides the fin design details. The fin design and placement are consistent with the open top heatsink design specified in section 3.4, to comply with the EMI cage finger in Section 5.3.

Figure C-1: OSFP module with bottom heatsink

Figure C-2: OSFP with bottom heatsink, shape of the back

Figure C-3: Bottom heatsink fin pitch

Appendix D. Latch release width inspection fixture

D.1 Example of the latch release width inspection fixture

In Figure 3-23 and Figure 4-7, maximum OSFP module latch release is specified. The maximum width between two opposite latch release can be measured in a virtual condition (as in the Figure 3-23), or whether the module can pass the cavity of the width of 22.78mm which is functional requirement for the OSFP module. Both methods are fine.

Figure D-1 shows a fixture, which can accept an OSFP module. The inlet has 22.78mm width. Figure D-2 shows the usage of the fixture; when the module placed to the fixture which have 45 degrees to the ground, the module is accepted if the module can be drop to the fixture with gravity or with up to 10N of the additional force.

Figure D-1: Latch release width fixture

Figure D-2: Usage of the latch release width fixture
